

Quantum randomness modules

EPIC Online Technology Meeting on Quantum
Communication & Quantum Key Distribution

What we do.

We build quantum technologies for safer connectivity and more powerful computation.

Based in the Barcelona area in the Mediterranean Technology Park.

Deep tech company spin-off from ICFO – The Institute of Photonic Sciences.

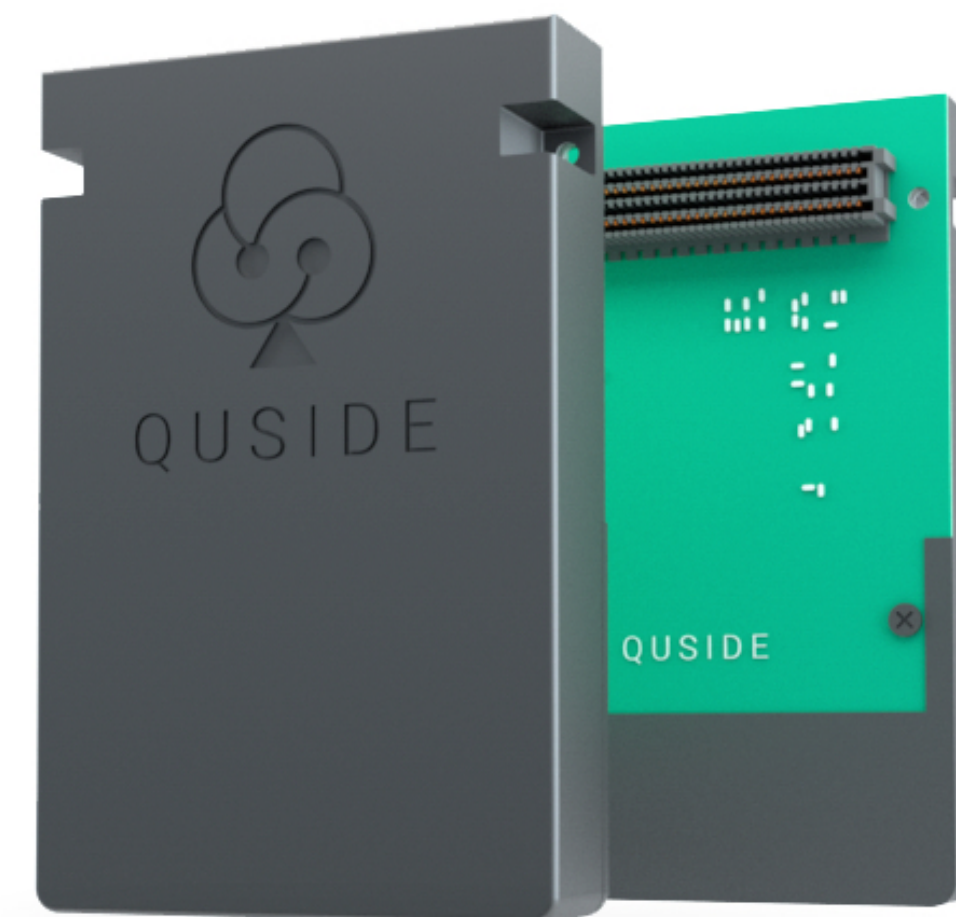

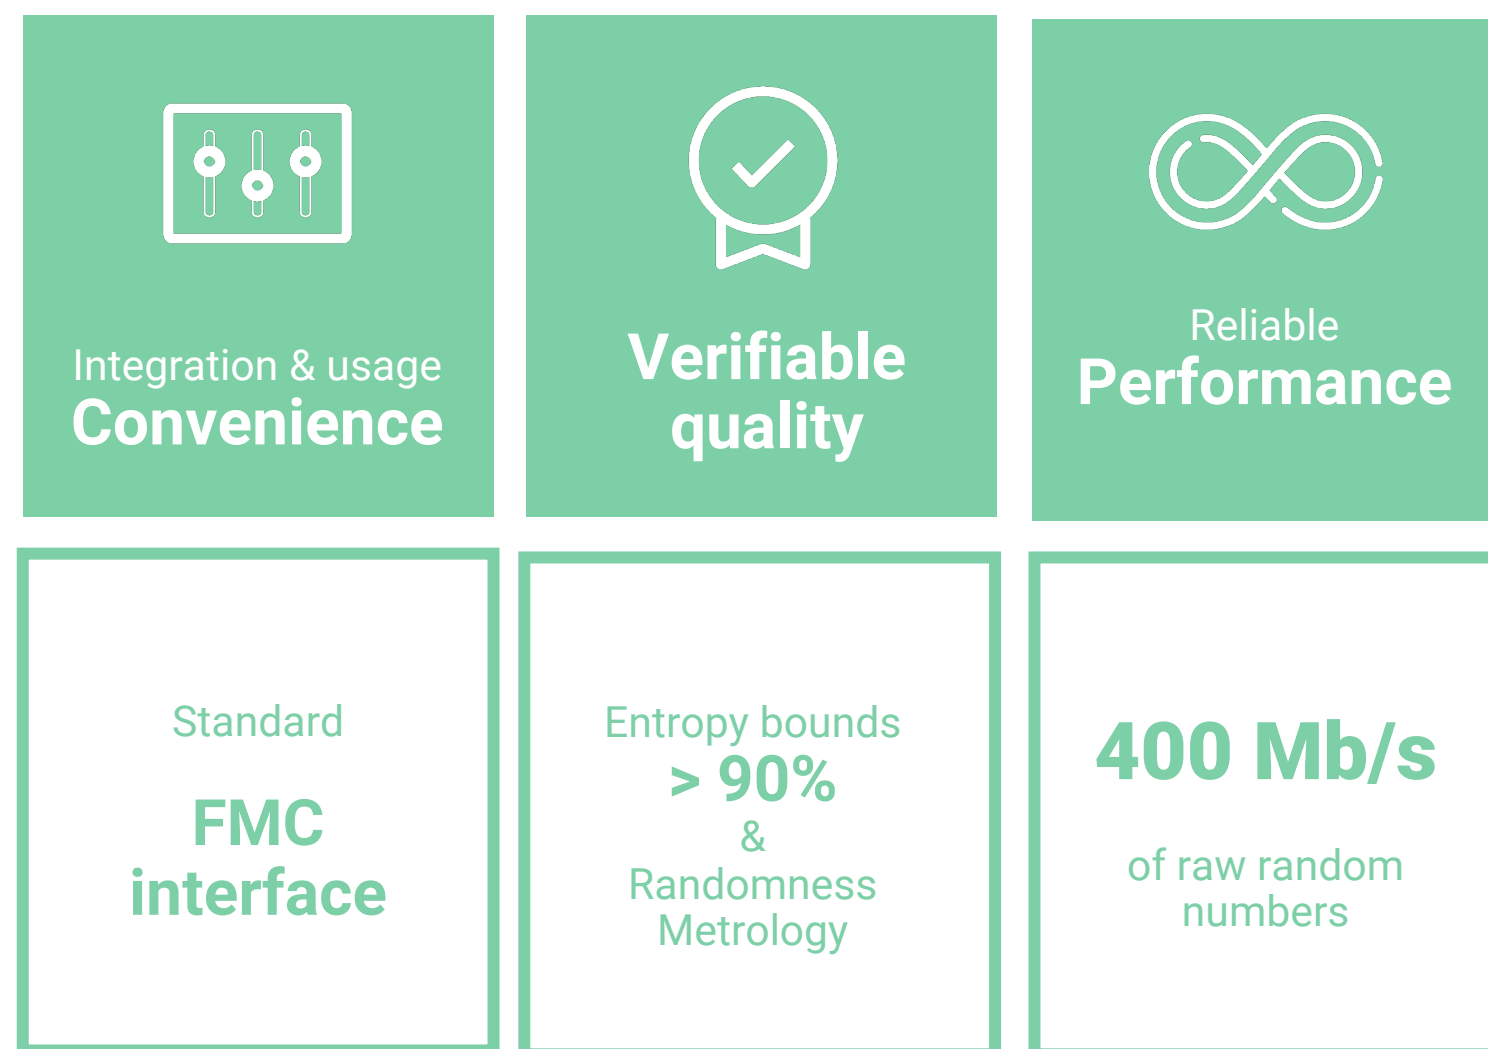

Track record in quantum and photonics with pioneering scientific results and patents.

What we offer.

Quantum entropy solutions based on Quside's phase-diffusion technology for security and high-performance computing.

The Quside™ FMC 400 is ready for shipping today.

- Prototyping kits available.
- Specific solutions for CV-QKD and DI protocols.
- Highly integrated solutions (PIC) also available.

What we look for.

Partner with system makers to:

- Integrate our products
- Understand your randomness needs better
- Help on utilizing physical randomness optimally
- Improve our next product releases

Collaborate with end users to:

- Test existing quantum technologies
