

Nanoscribe and Photonic Packaging Technology

Jörg Smolenski

Business Development Manager

Nanoscribe GmbH

04th April 2022

Main challenges in Hybrid Packaging

- ▶ Reduce coupling losses from/to fibers, edge couplers, grating coupler, emitting facets and especially between different material platforms
- ▶ Steer and form beams
 - From small to large or large to small Mode Field Diameters (MFD)
 - In different directions ($0^\circ, 45^\circ, 90^\circ, \dots$)
- ▶ Relax alignment tolerances for packaging to several μm instead of 100's nm
- ▶ Flexible use with any material platform & wavelength (InP, SiN, Si,...)

Quantum X align – Dedicated tool for improved optical coupling

- ▶ Up to 100 nm precise alignment to waveguides
- ▶ Automatic printing on fiber arrays & chips
- ▶ Web offer with Partner PHIX for Lensed Fiber Arrays (LFA)

Printing on fibers

3D alignment to fiber core and emission direction

*

Printing on photonic chips

3D alignment to on-chip markers, waveguides etc.

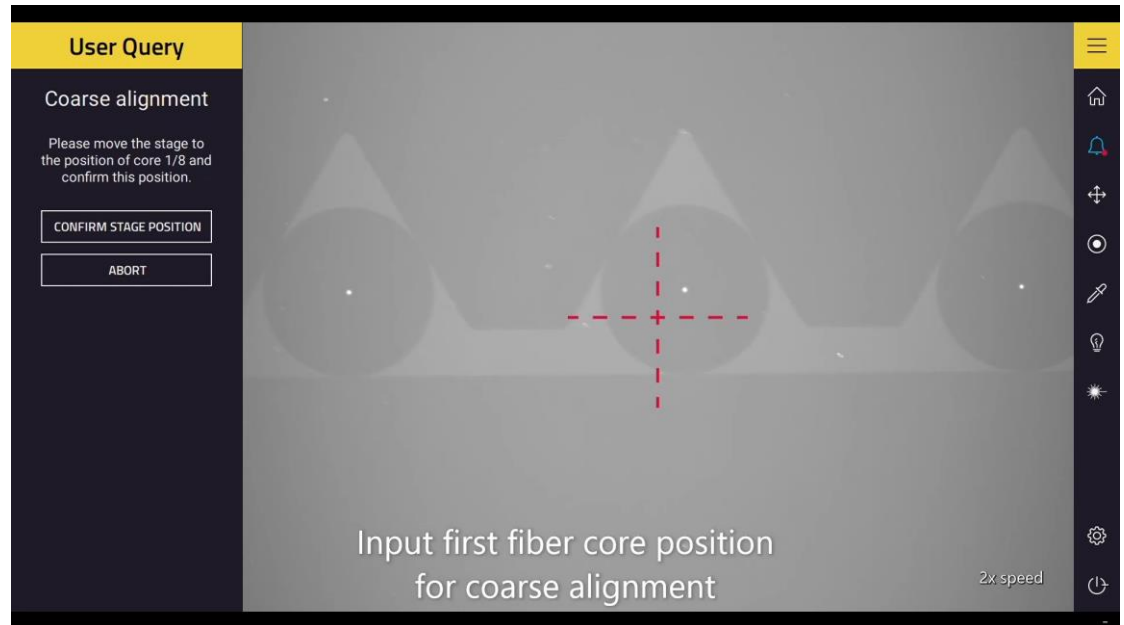

Printing on 3D topographies

3D alignment to topographical features

Application example – Printing on fibers

Beam expander for 532nm wavelength

Application example – Printing on photonic chips

Beam shaping optics for 1060nm

Application example – Printing on photonic chips

Beam shaping optics for 1060nm

7. Development and visual check

Quantum X- align

Aligned multiphoton lithography for high precision

▶ 3D Printing designed for Photonic Integrated Circuits (PIC)

- Reduce coupling losses → < 1dB ✓
- Steer and form beams from
 - From small to large or large to small Mode Field Diameters (MFD) ✓
 - In different directions (0°,45°,90°,...) ✓
- Relax alignment tolerances for optical coupling → +- few μm (X-Y-Z) ✓
- Flexible with any material platform & wavelength → aligned 2PP 3D Printing ✓

Quantum X align
with automated
alignment

EPIC questions and answers

▶ What can we do for you ?

- We can enable efficient coupling between different material platforms due to adaption of the MFD diameter with 3D Printed Free Space Micro Optics
- This means:
 - Feasibility studies, Prototyping, Design, Simulation and ... Equipment

▶ What can you do for us ?

- Challenge us with your PIC optical coupling issue:
 - Edge coupler, Fiber Arrays, Grating Coupler, Tapered 3D coupler , Adiabatic coupler, Si, Soi, SiN,

Application examples

EPIC OTM on-hybrid-phonic-
integrated-circuits

Application example – Printing on fibers

Tailored lensed fibers

Beam expander for relaxed alignment tolerances in packaging

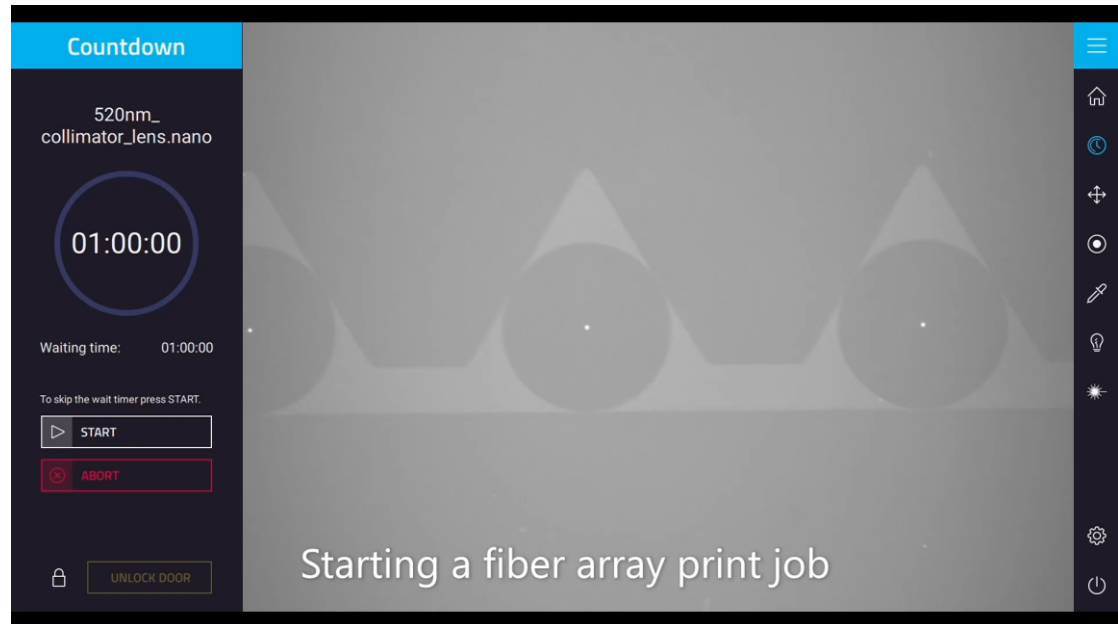

Focusing lenses for low loss direct coupling to tapered waveguides

Application example – Printing on fibers

Beam expander for 532nm wavelength

Application example – Printing on fibers

3.6 μm MFD focus lens for 1550nm

Simulation
Measured beam

Application example – Printing on photonic chips

Beam shaping optics for 1060nm

Application example – Printing on photonic chips

Beam shaping optics for 1060nm

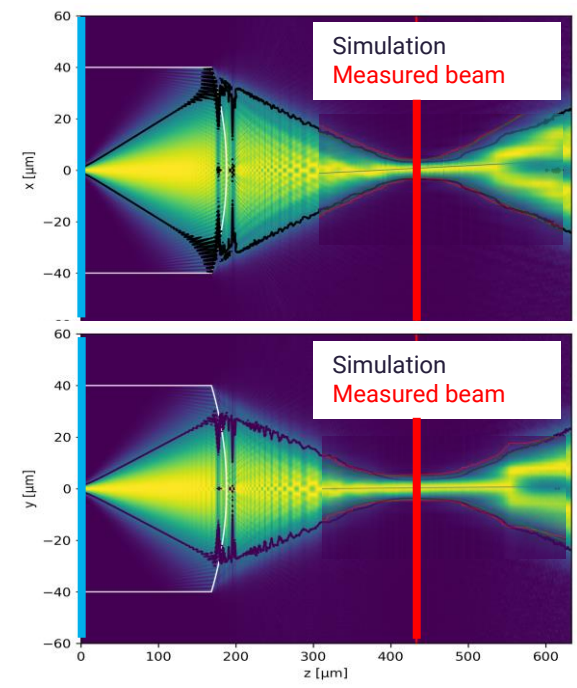

Application example – Printing on photonic chips

Beam shaping optics for 1060nm

8. Beam characterisation

Application example – Printing on 3D topographies

Tips and rebar structures on AFM cantilever

Application example – Printing on 3D topographies

Tips and rebar structures on AFM cantilever
