

# Low cost and scalable QKD using continuous variables

Maxim Kuschnerov  
Director of the Optical and Quantum Communication  
Laboratory, Germany  
27.06.2022

Monday, 27 June 2022, 15:00 - 17:00 CEST

EPIC Online Technology Meeting on Quantum  
Communication and QKD

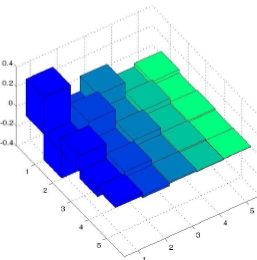

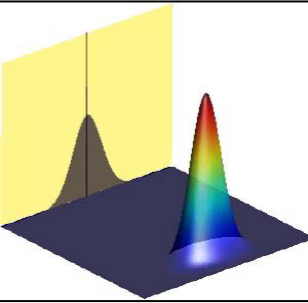

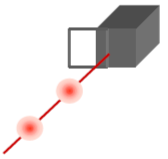

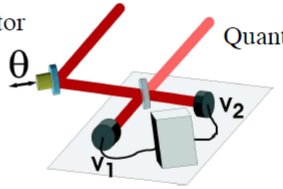

**Vision and Mission**

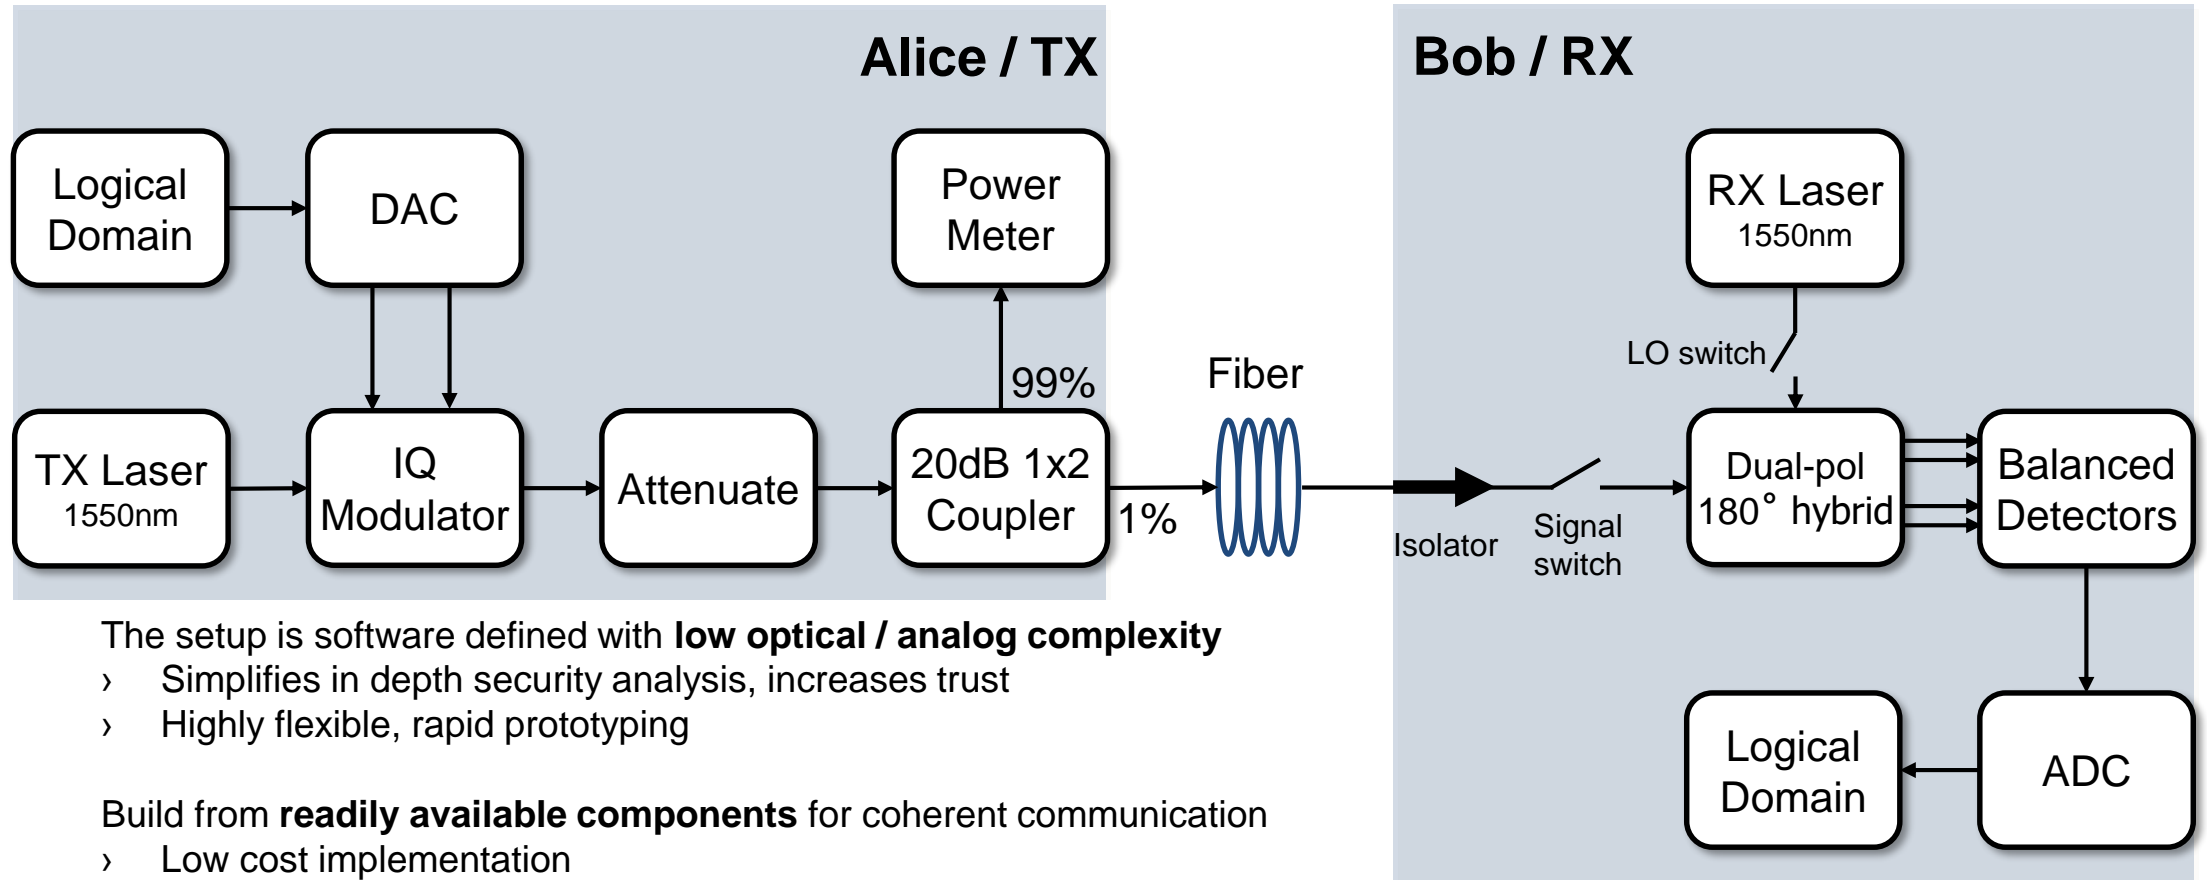

Bring digital to every person, home and organization  
for a fully connected, intelligent world

# Discrete vs. continuous light

Light is :	Discrete  Photons	Continuous  Wave
We want to know :	their Number & Coherence	its Amplitude & Phase (polar) its Quadratures X & P (cartesian)
We describe it with :	Density matrix $\rho_{n,m}$ 	Wigner function $W(X,P)$ 
We measure it by :	Counting: APD, VLPC, TES... 	Demodulating : Homodyne Detection  $V_1 - V_2 \propto X = X \cos \theta + P \sin \theta$
« Simple » States	Fock States	Gaussian States

# Low complexity hardware architecture

# CV-QKD pre-development prototypes

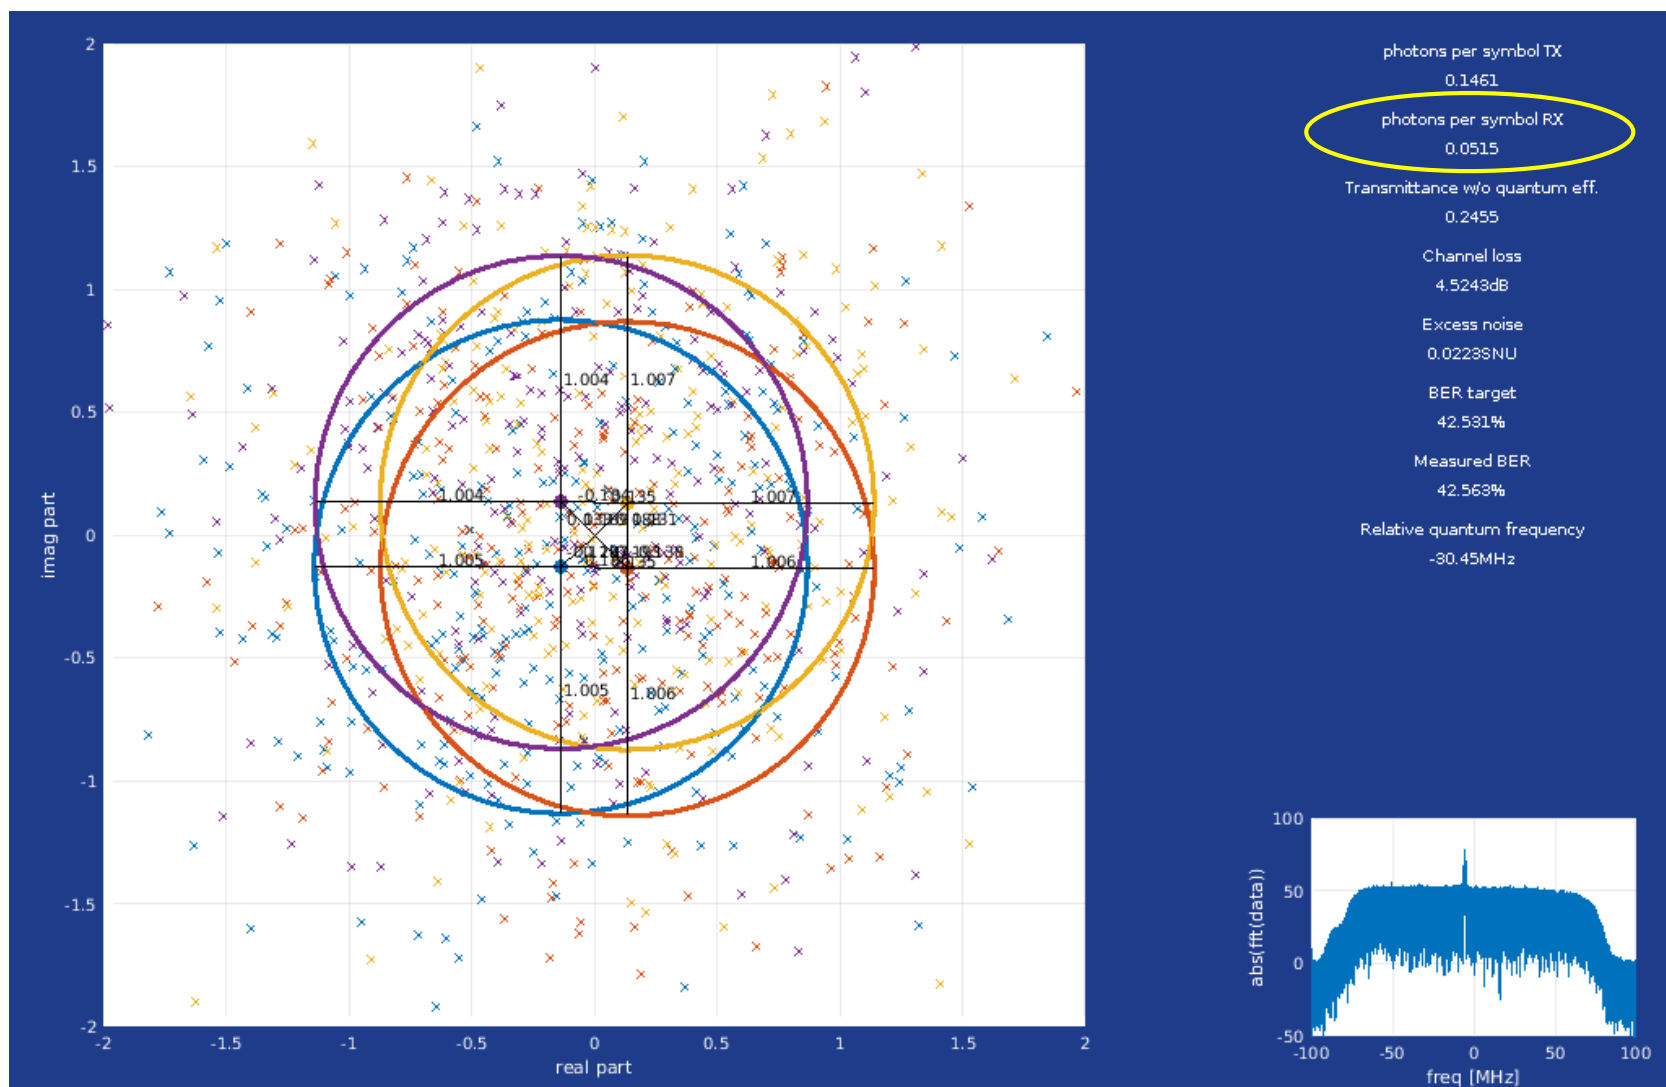

Alice

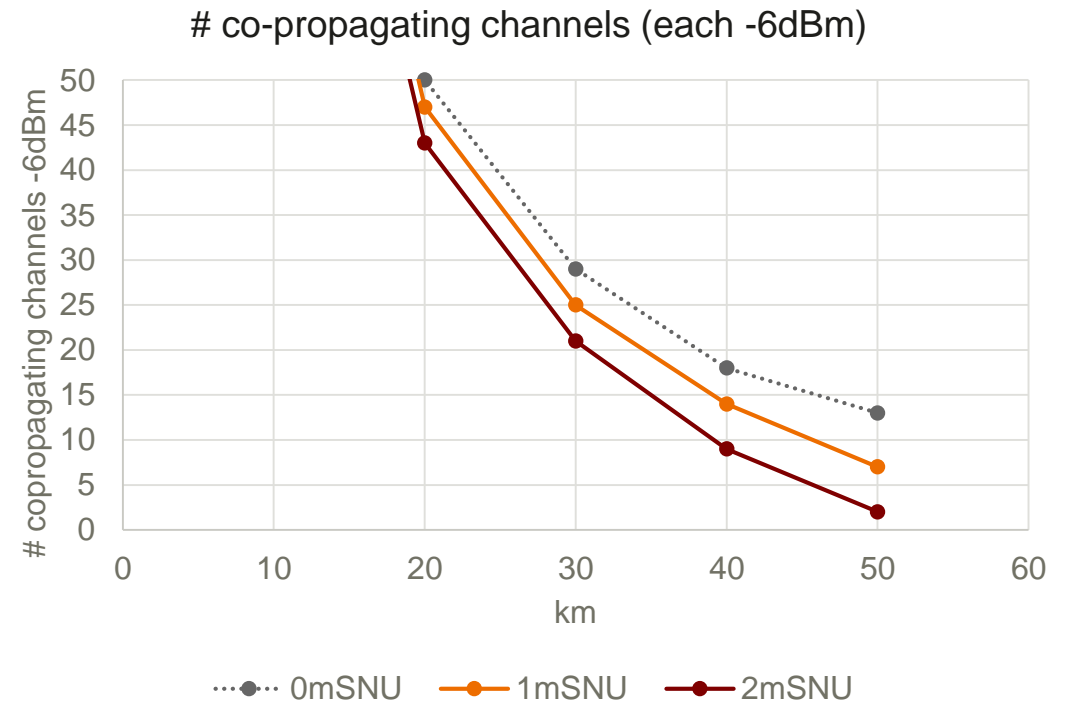

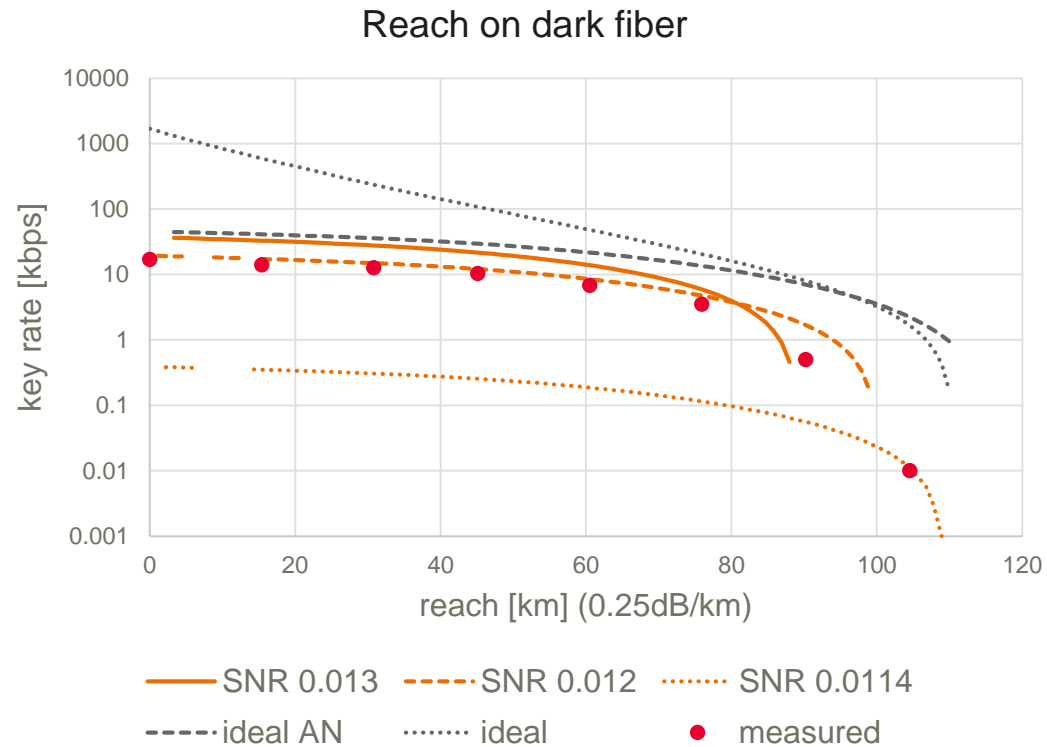

Bob

# CV-QKD received signal

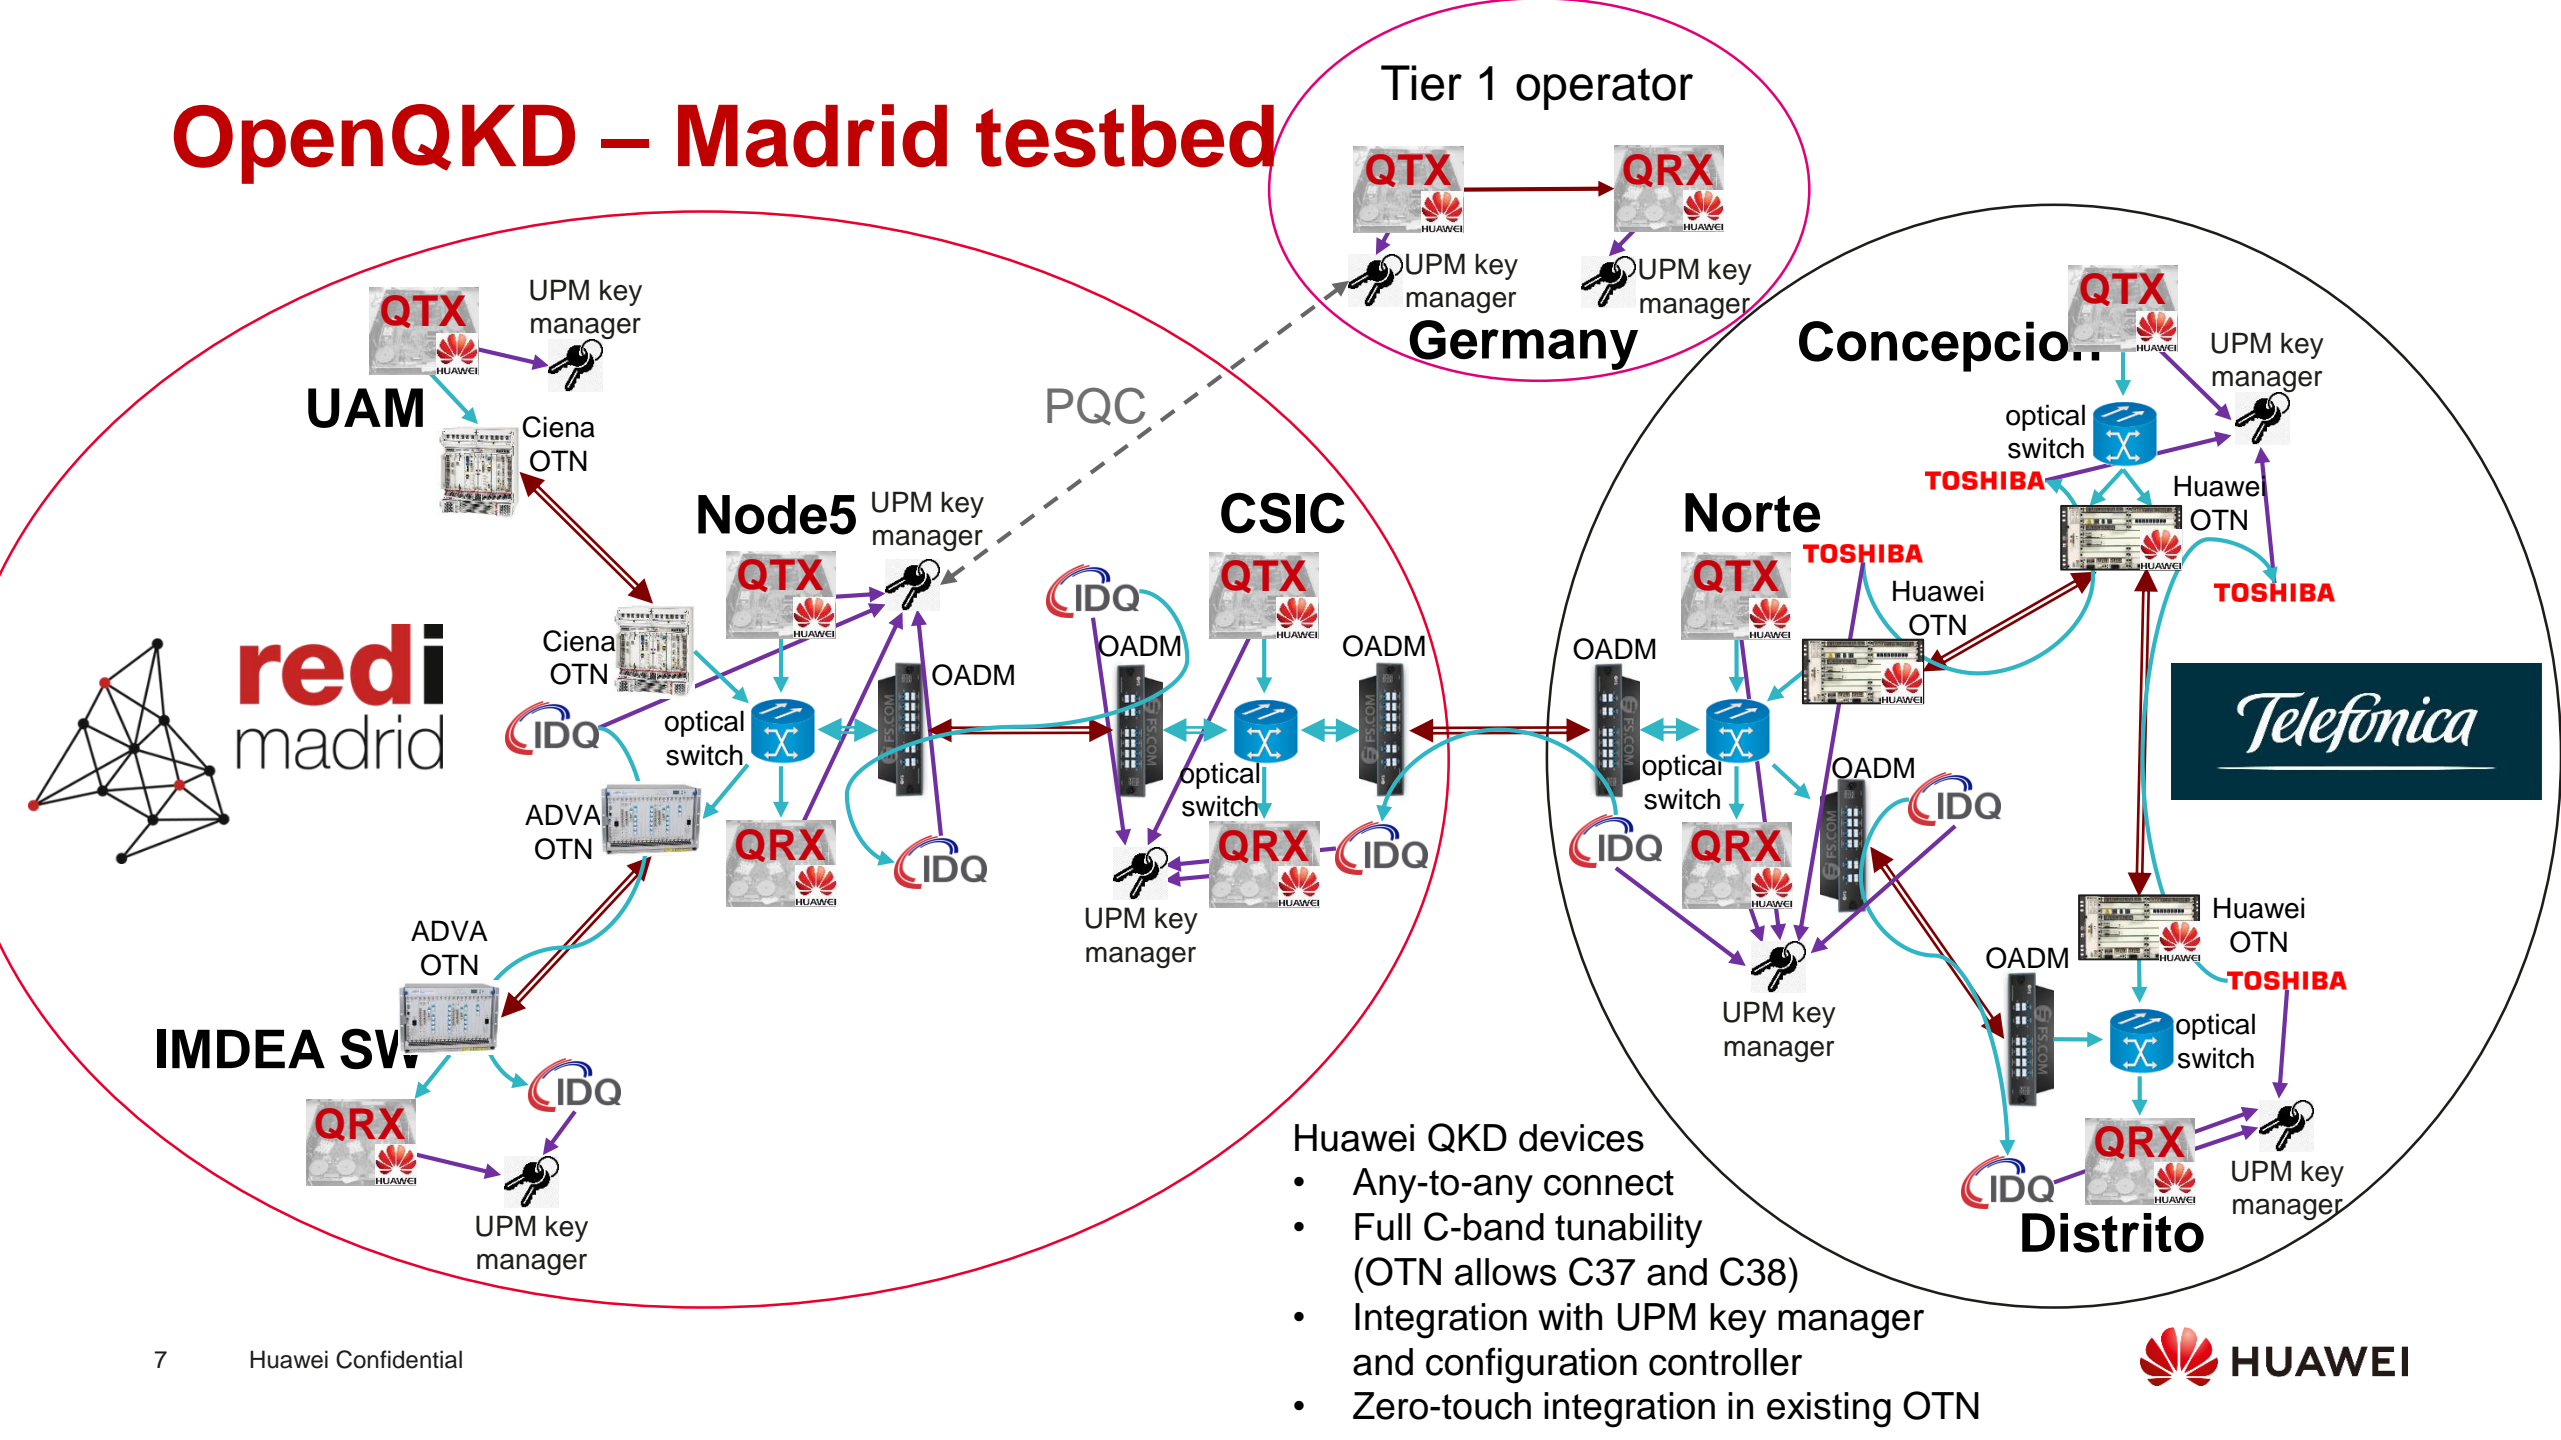

# Reach and co-propagation

# OpenQKD – Madrid testbed

## Huawei QKD devices

- Any-to-any connect
- Full C-band tunability (OTN allows C37 and C38)
- Integration with UPM key manager and configuration controller
- Zero-touch integration in existing OTN

# Benefits of Huawei QKD

- Thoroughly investigated and robust QKD implementation
- Software defined for maximal flexibility and centralized configuration
- Low-cost implementation with a clear road for full integration and high volume
- Reach and key rate optimal for metro environment
- High tolerance to co-propagation of classical channels (10x more than DV-QKD)
- Possibility of zero-touch integration (plug into existing OTN without modification)
- Field deployment and integration with existing hardware has been demonstrated
- Any-to-any connectivity with  $\sim N$  devices in N-node networks

➔ **Scalable towards simpler, cheaper, smaller implementation**

# Thank you !
