

About Us

Quantopticon builds an automated design platform (Quantillion) for quantum photonic engineers who want to rapidly build optimised, high-quality single-photon sources, qubits, and other quantum photonic components.

Quantillion permits to arrive at a **high-spec, peak-performance** component **an order of magnitude faster and more affordably** than existing approaches.

We are seeking...

Photonic quantum computing companies willing to partner with us so that we can develop much-needed CAD tools for integrated quantum photonics.
