

**First deployment of a 6-km long  
fiber-optic strain cable on a seafloor  
across an active submarine fault  
(ERC Focus)**

Lionel Quétel [lionel.quetel@idil.fr](mailto:lionel.quetel@idil.fr)

# Introduction

---

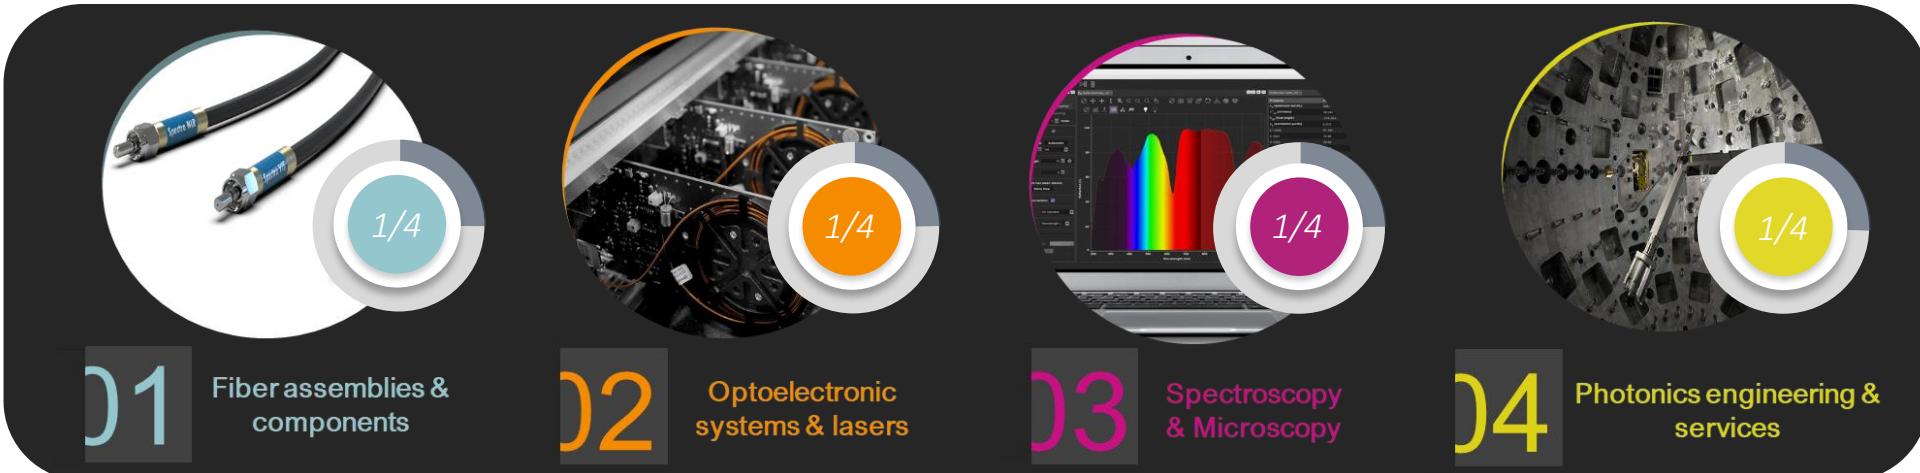

1. IDIL presentation
2. What is FOCUS project ?
3. Catania area
4. Measurement principle
5. The cable(s)
6. The deployment
7. First results
8. Other site
9. Conclusion

► Photonics solutions provider

## About the company (Ingénierie Développement Instrumentation Laser)

- **1995:** *Incorporation*
- **2300m<sup>2</sup>** *of Headquarter & facility*
- **3 Sales offices** *in main photonics clusters*
- **Team: 65** *talented people, led by its CEO Patrice Le Boudec*
- **+1000** *customers over the globe (90% France, 10% International)*
- **~7M€ turnover** *+10% annual growth*

**D1** Fiber assemblies & components

**D2** Optoelectronic systems & lasers

**D3** Spectroscopy & Microscopy

**D4** Photonics engineering & services

## ► Photonics engineering & services

# What we do?

A **photonics** solutions provider involved in many far-reaching and collaborative projects.

IDIL is specialized in the **production of optical components** and in the **design, development and assembly of complete optical systems** for the Science, Defense & Industry.

- *Specialized in sensor solutions*
  - Fiber Bragg Gratings
  - Smart cable implementation
- *For different applications*
  - Offshore
  - Civil engineering
  - Material...

► Photonics engineering & services

## FOCUS project

# Fibre Optic Cable Use for Seafloor

Studies of earthquake hazard and deformation  
Nov 2018- Nov 2025 : 7 years

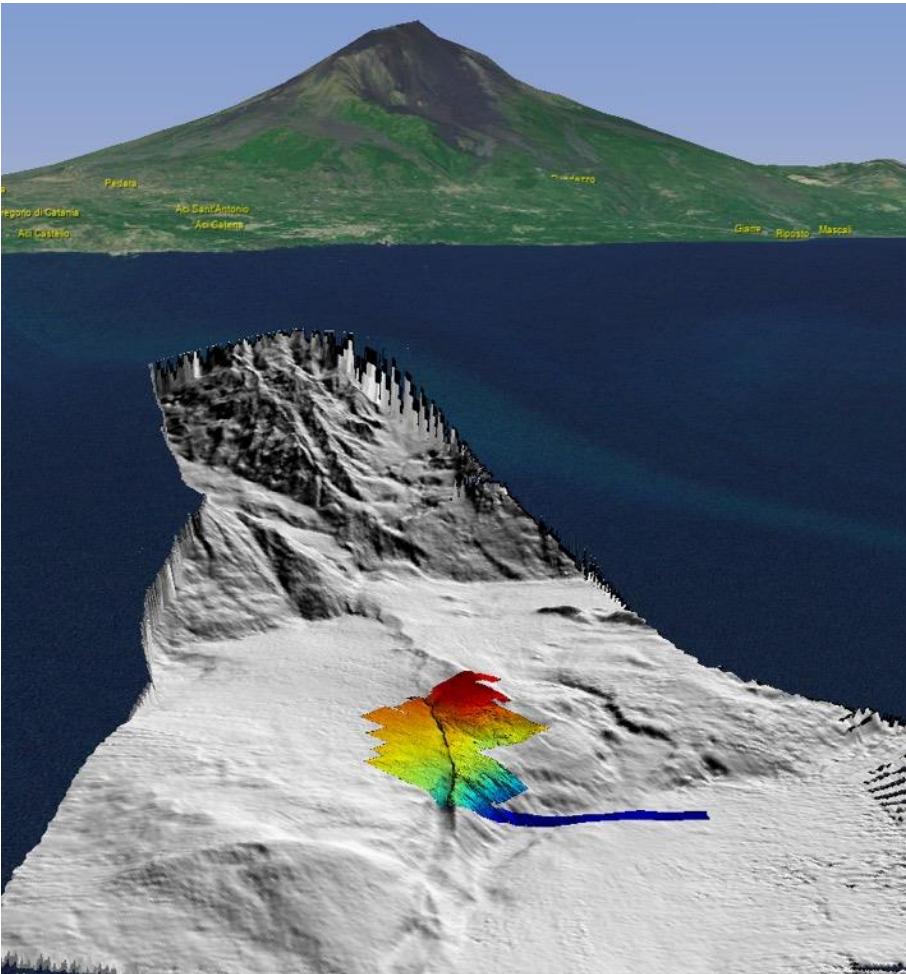

Istituto Nazionale  
di Fisica Nucleare

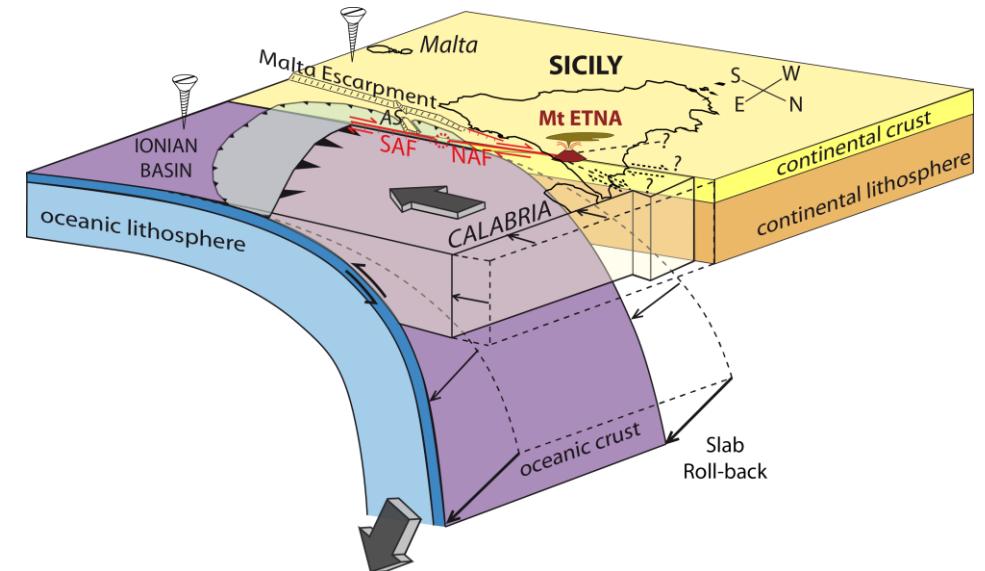

European Research Council  
Established by the European Commission

► Photonics solutions provider

## Catania area

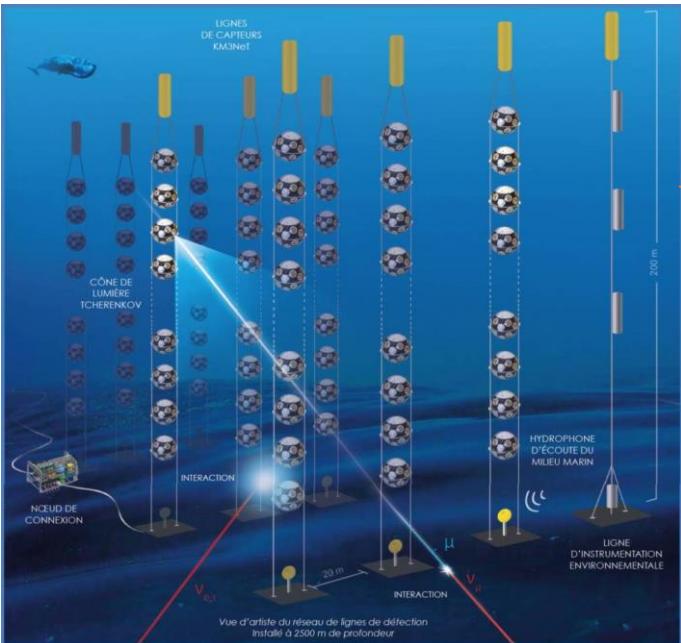

Fault @ 2000 m depth  
@ 25 km from the cost (Mont Etna)

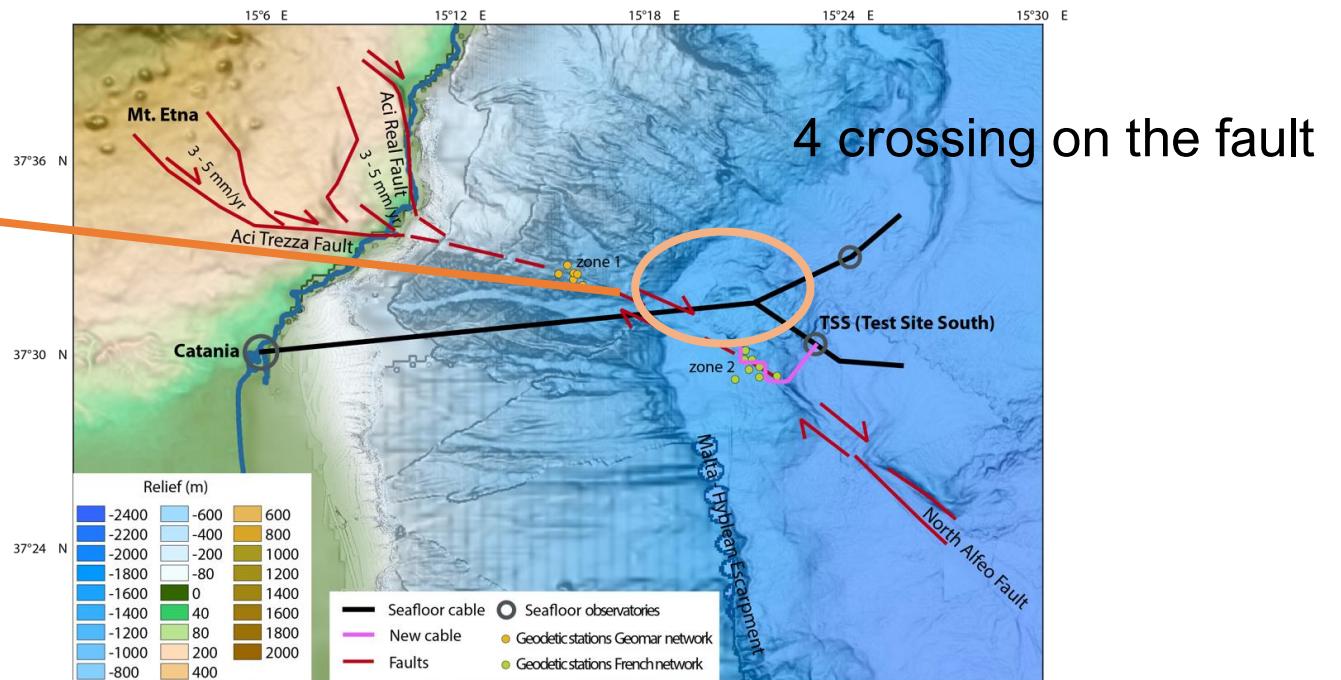

The North Alfeo Fault

## Catania area

Goal = Deploying a 6 km long optical cable on the fault connected to the 25 km long cable of the INFN used for neutrino detector array. Performing BOTDR<sup>1</sup> measurements on the cable.

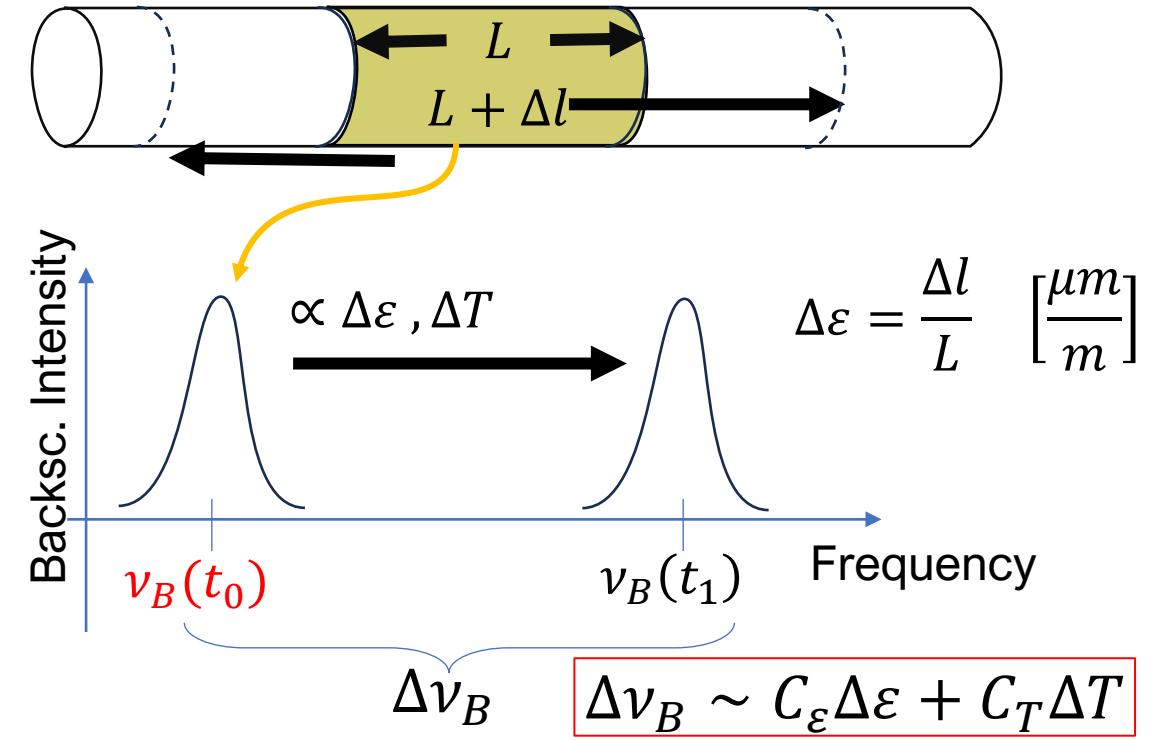

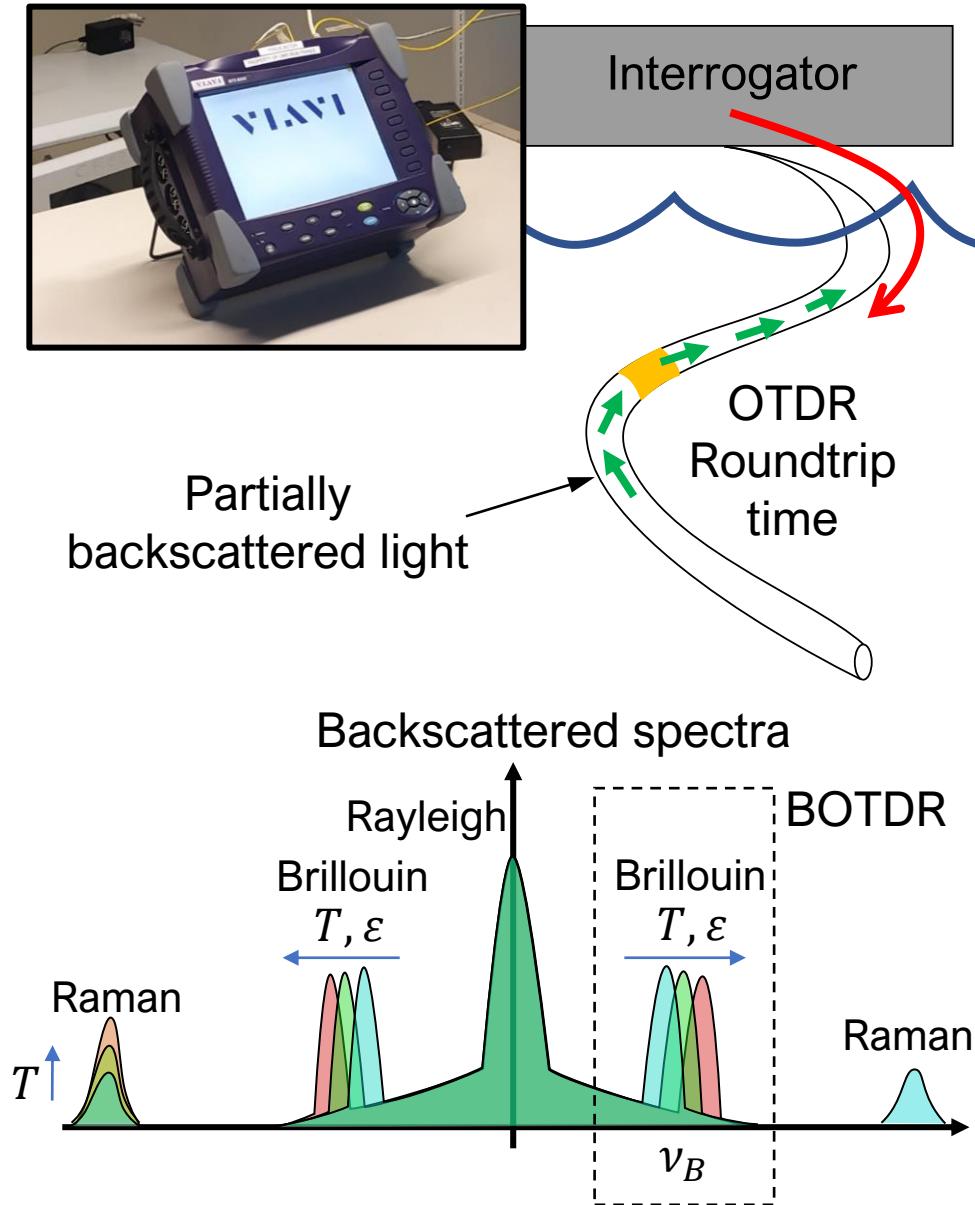

Neutrino detector array

Fault @ 25 km from the Mont Etna. Movement: 1cm/year

# Measurement principles and key performances

<b><math>\Delta T</math> accuracy</b>	0.5 °C
<b><math>\Delta\varepsilon</math> accuracy</b>	10 μm/m = 0.001%
<b>Range</b>	60+ km
<b>Sampling interval</b>	2 m
<b>Spatial resolution</b>	10 m
<b>Acquisition time</b>	2 hours

► Photonics solutions provider

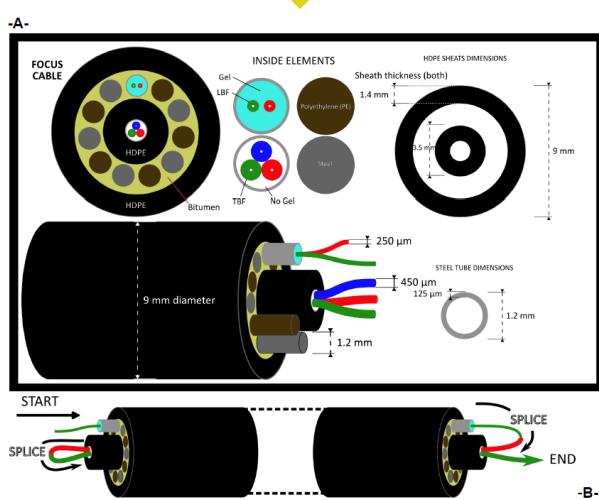

# The cable(s), preparation

	<b>Technical Description</b> FO Sensor Cable	Doc No.: TA494-TD Issue: 02T Date: 2018-10-10 Page: 7 of 7
---	---	---

## 4 CROSS-SECTINAL DRAWING

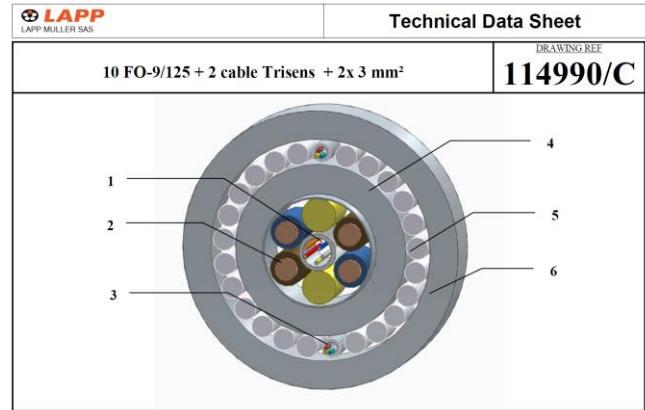

Drawing No:  
D-111150 Issue 5

6 km long cable deployed  
2 channels

- 18 km (3 fibres)
- 12 km (2 fibres)

More than 30 km of sensor

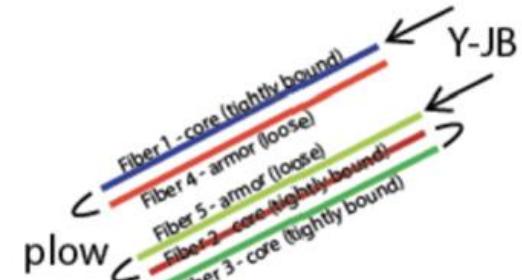

1 km long cable under test

5 fibres:

- 2 Loose
- 3 Tight

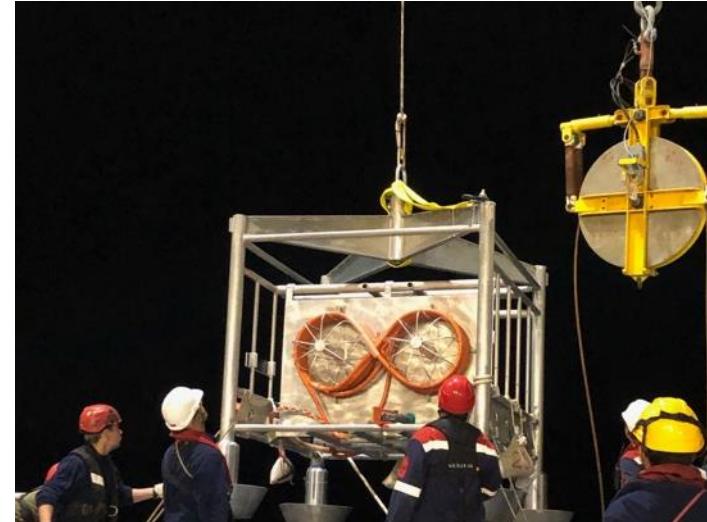

► Photonics solutions provider

## The deployment (important dates)

- Deployment Oct. 2020
- Bag Drop Operations Sept. 2021
- Strain measurement since Oct. 2020

(1) Instrument deployed from IFREMER's vessel "Pourquoi pas"

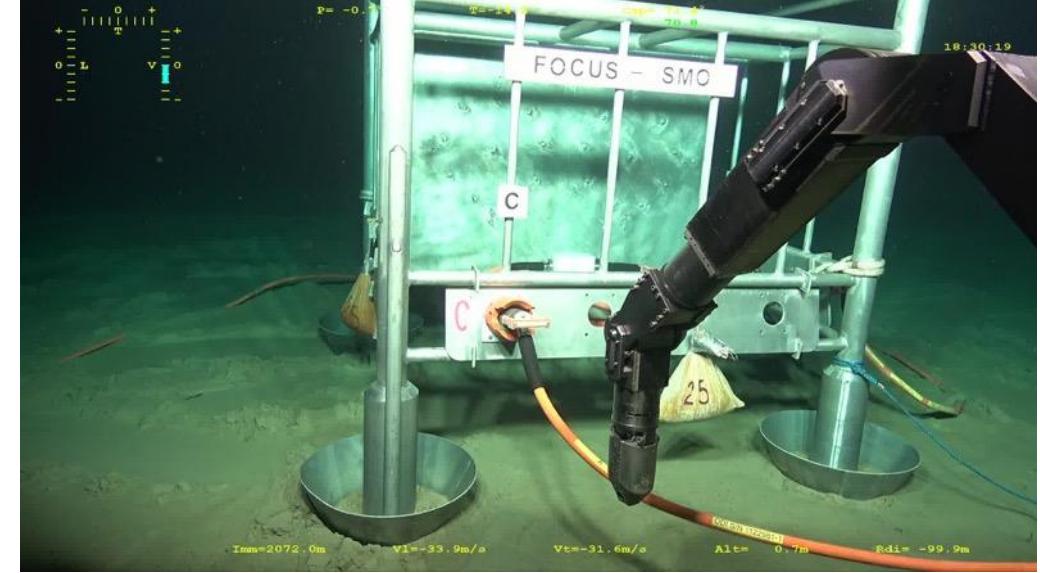

(2) Y junction Box

(3) Deep sea plow carried by the ROV Victor

► Photonics solutions provider

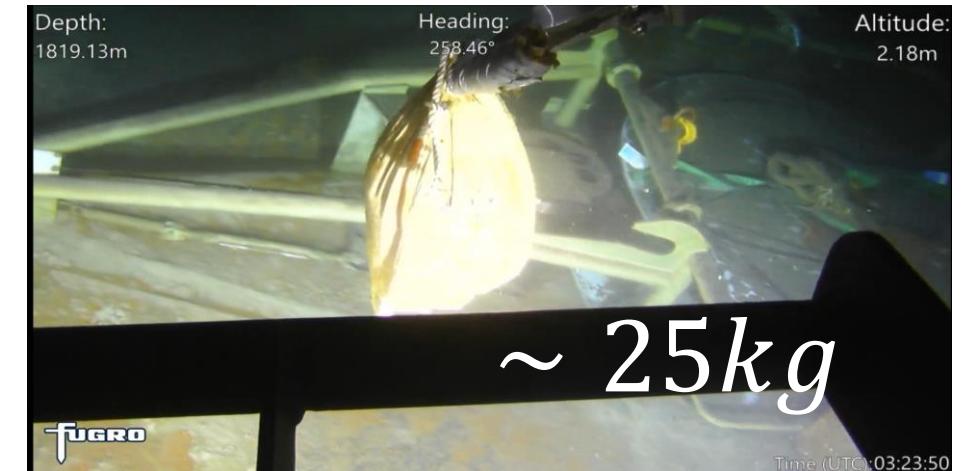

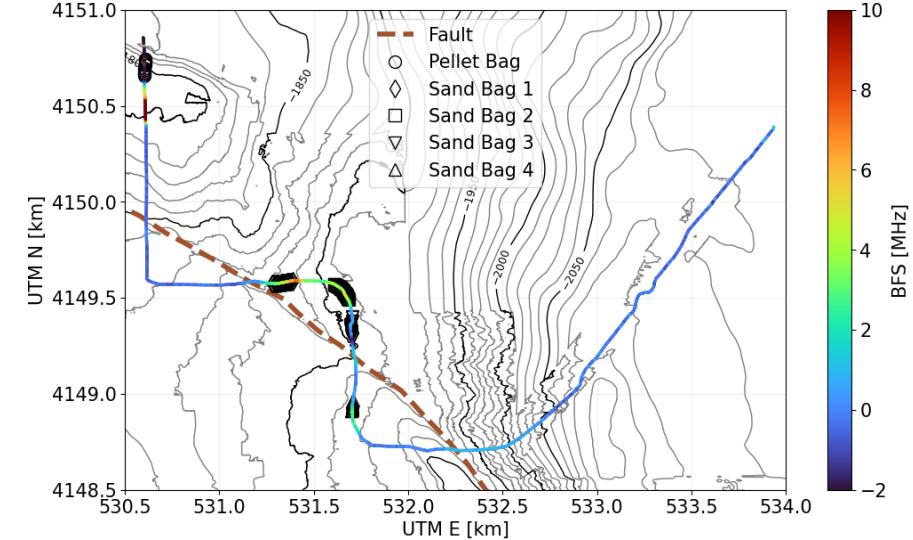

## The deployment (important dates)

Connection to the Y junction box (using ROV Victor)

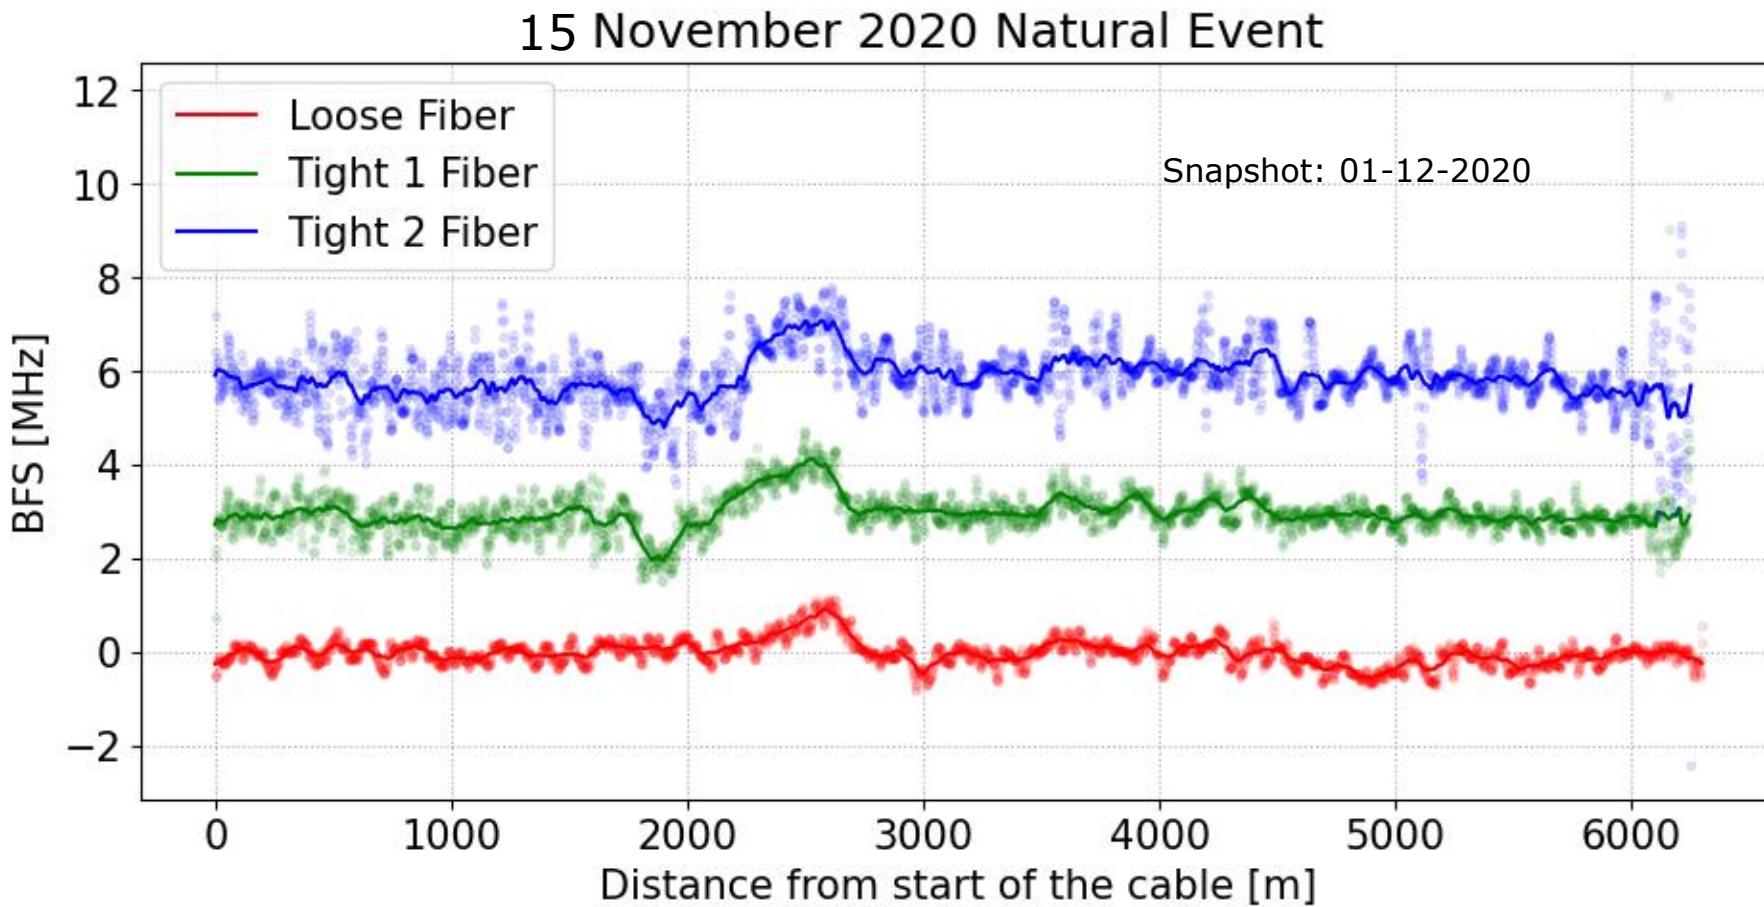

► Photonics solutions provider

## The deployment (Bag drop operation since 2021)

Plow and cable end module; Deep sea plow for cable laying in the sediments

# First results

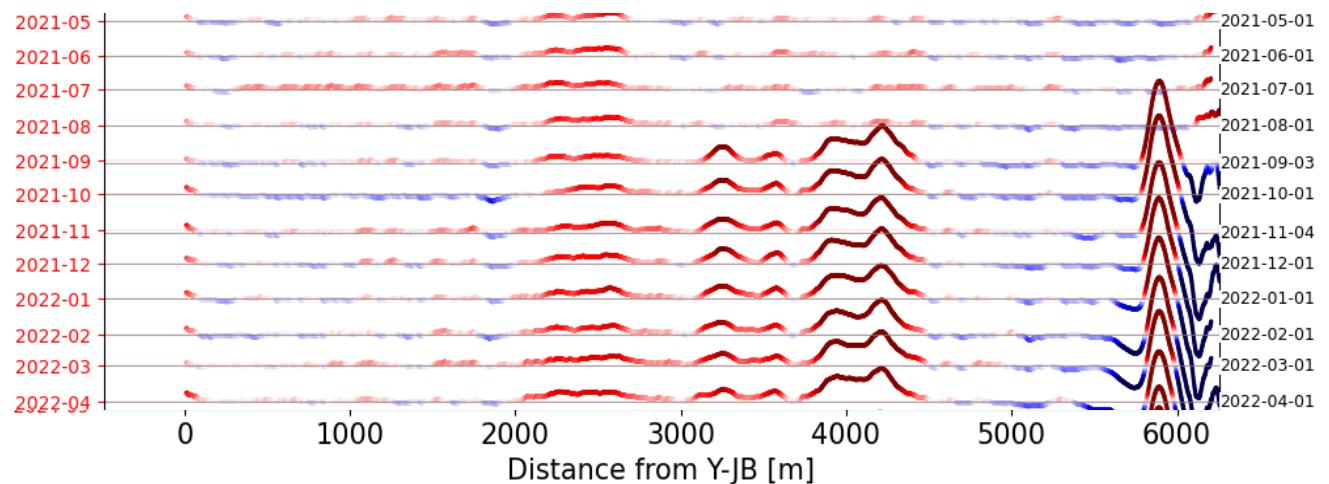

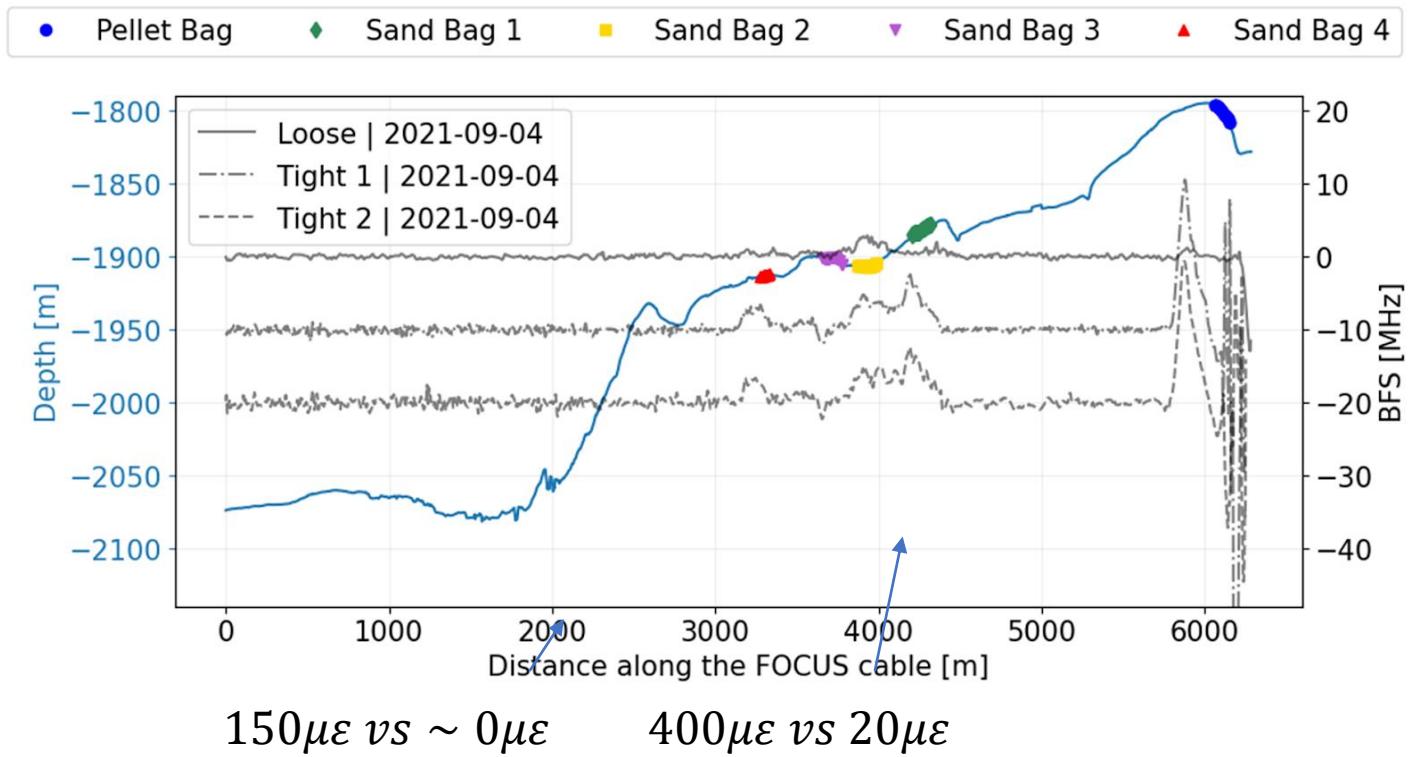

Natural Event Nov 2020

# First results

---

Bag dropping:

- 5 areas
- relaxation with time

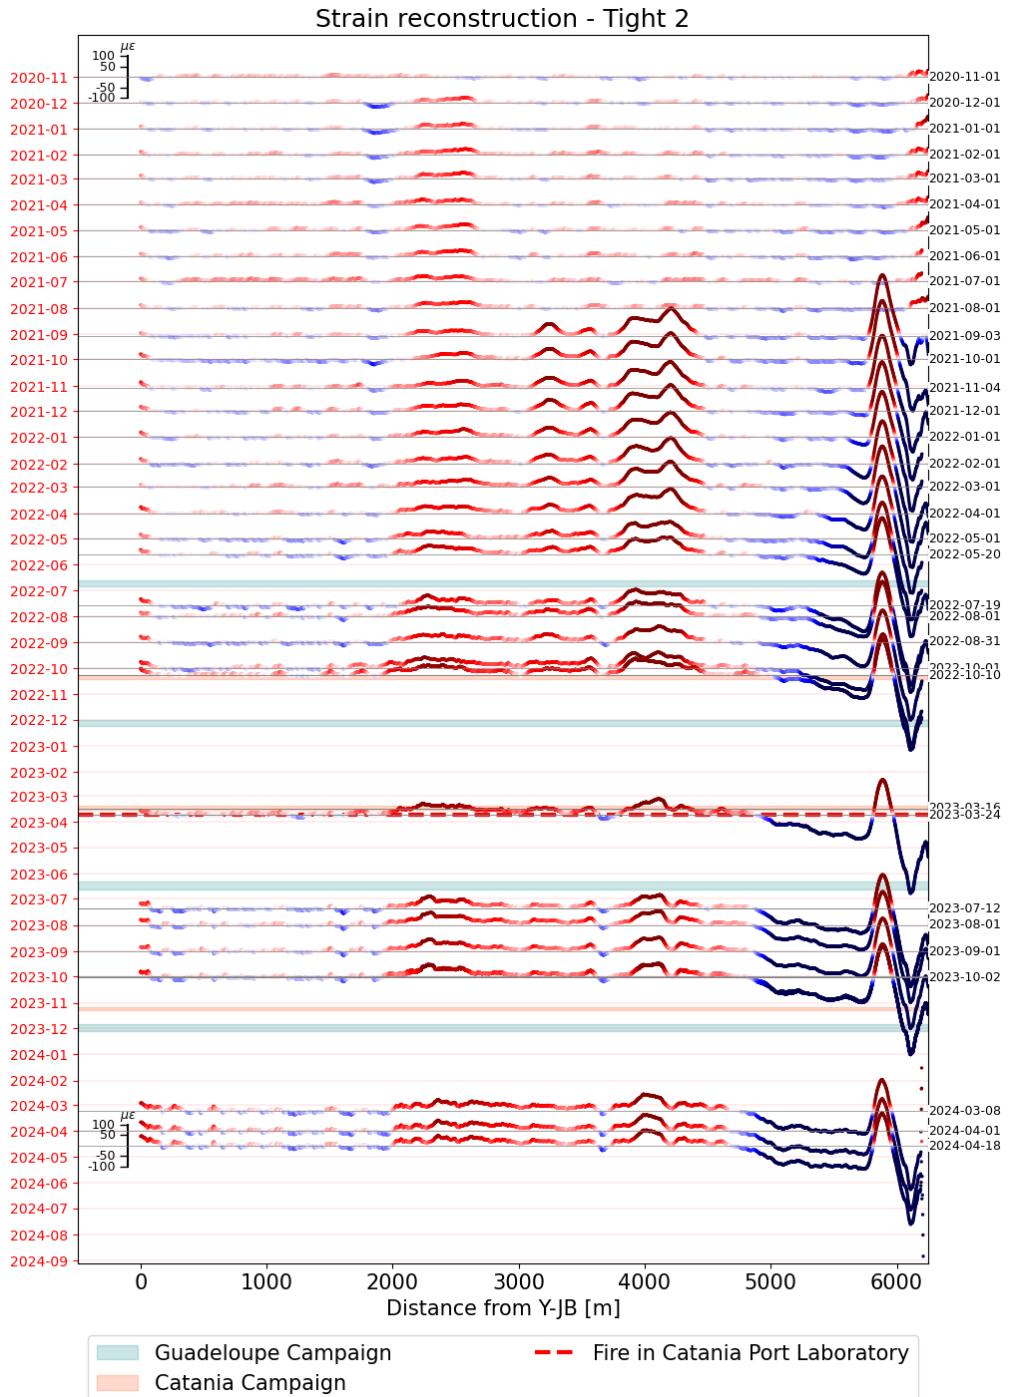

► Photonics solutions provider

## First results

---

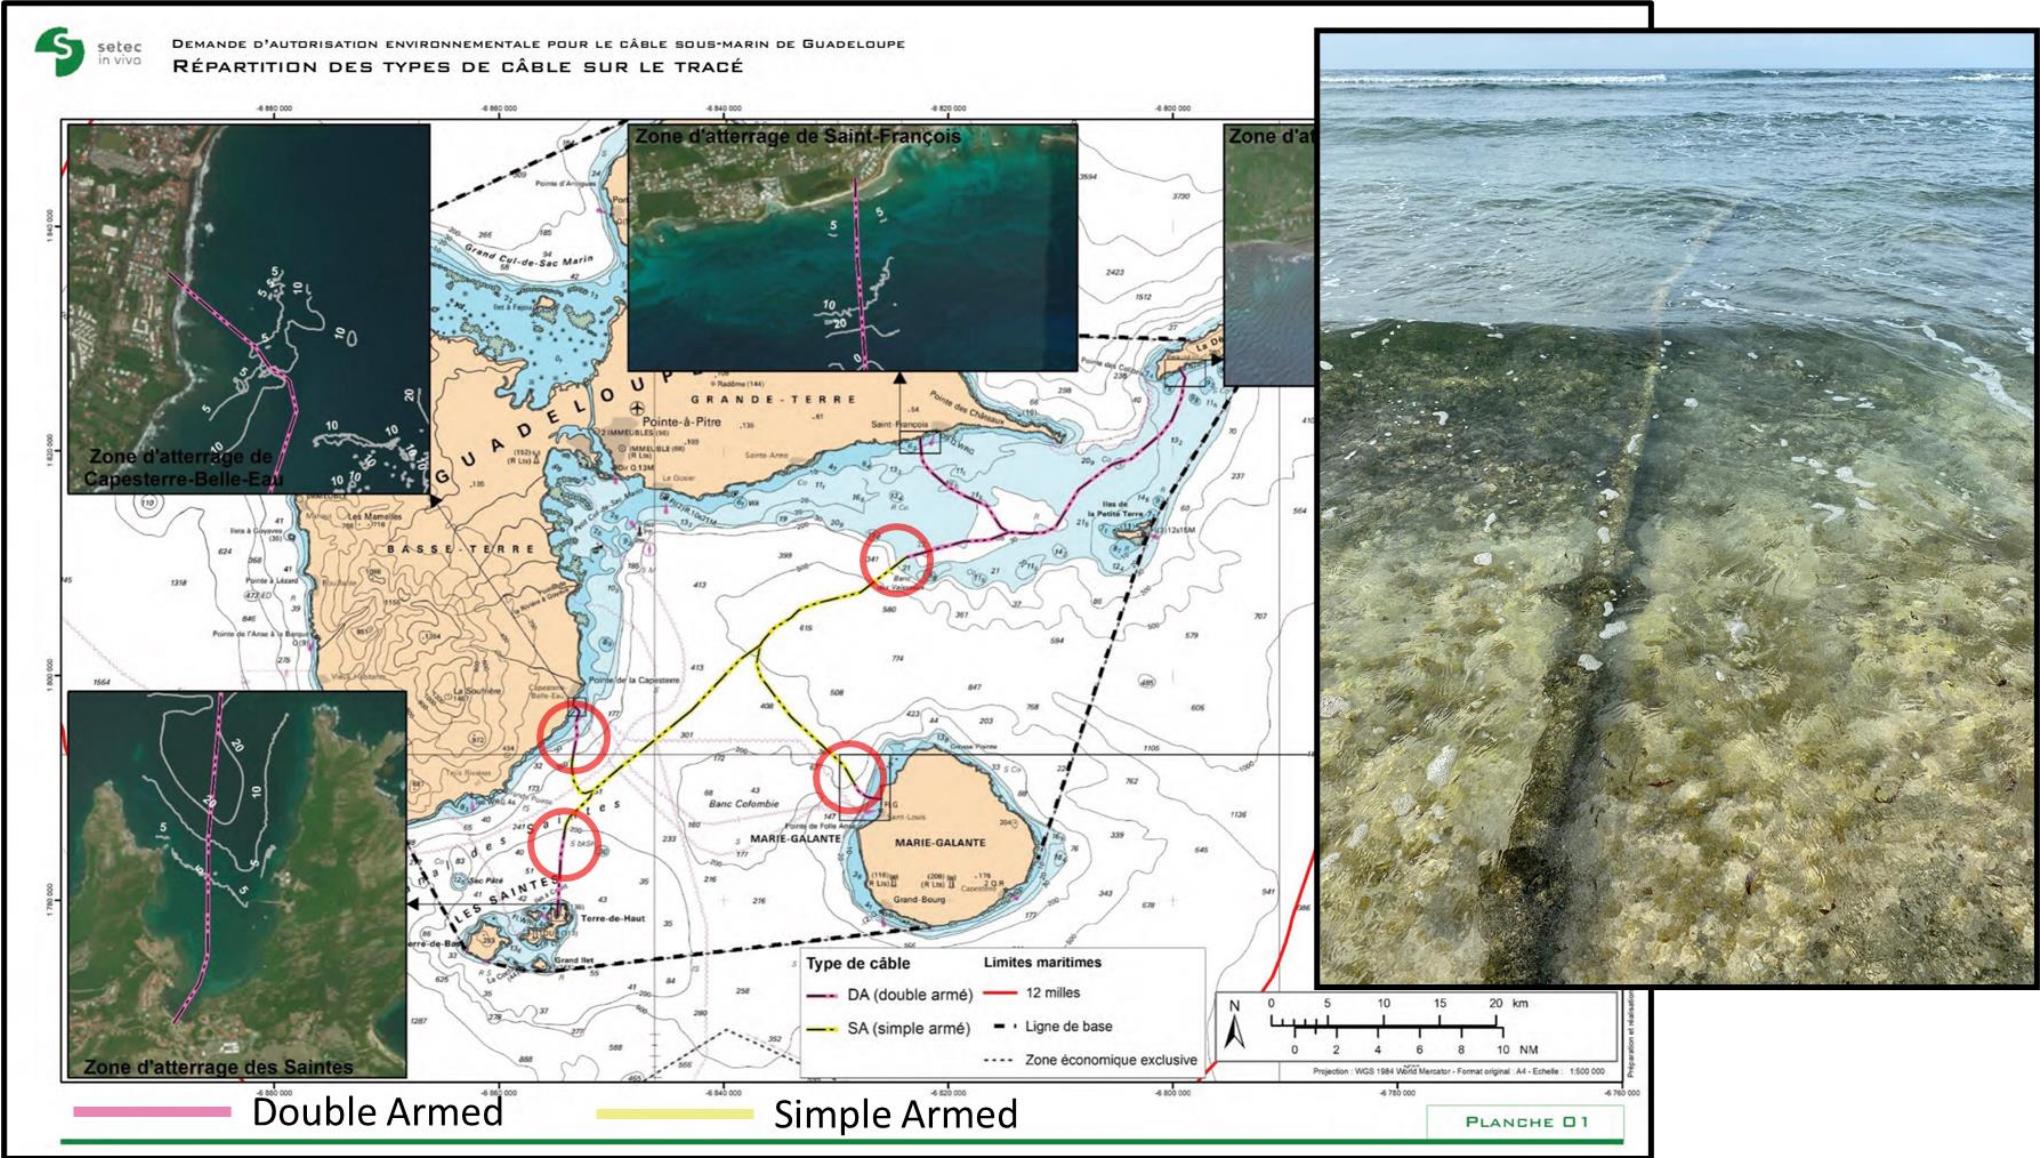

Almost 4 years of monitoring

- Bag effects relaxation
- No real fault modification

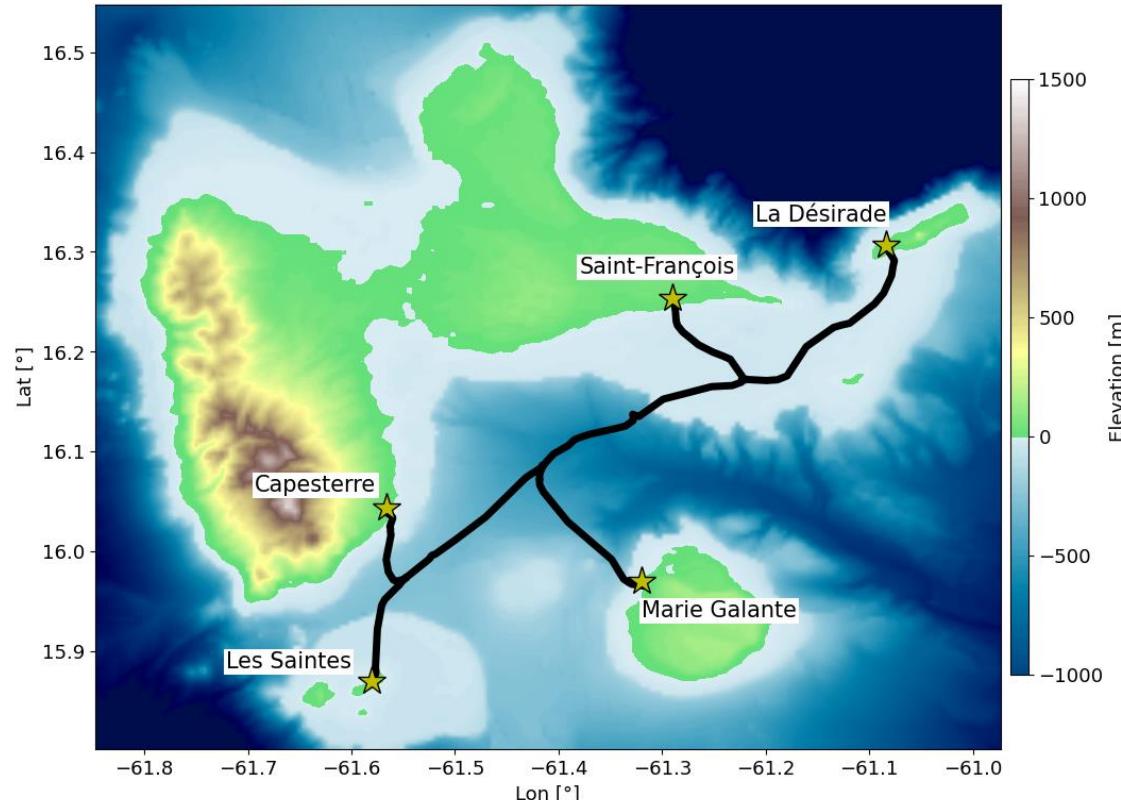

► Photonics solutions provider

## Other site: Fibres optical cable off Guadeloupe island

► Photonics solutions provider

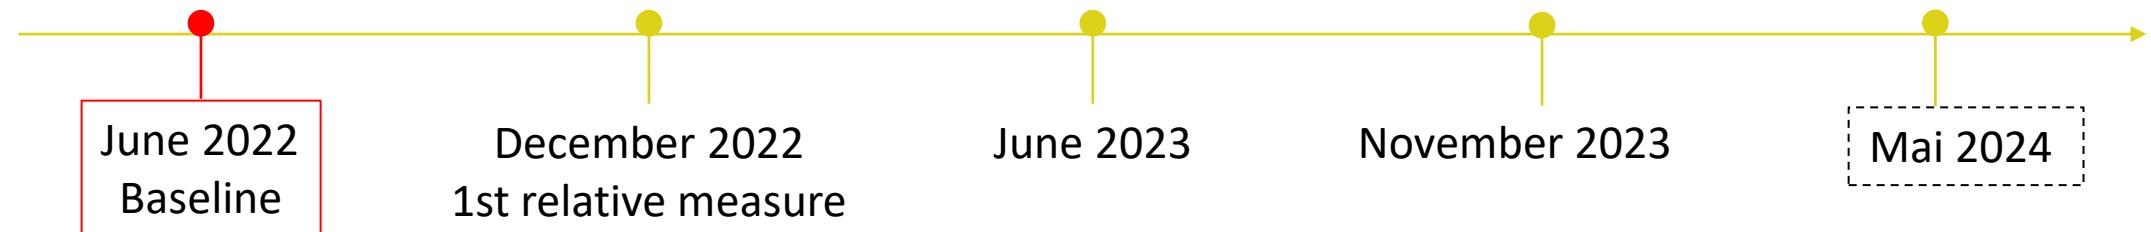

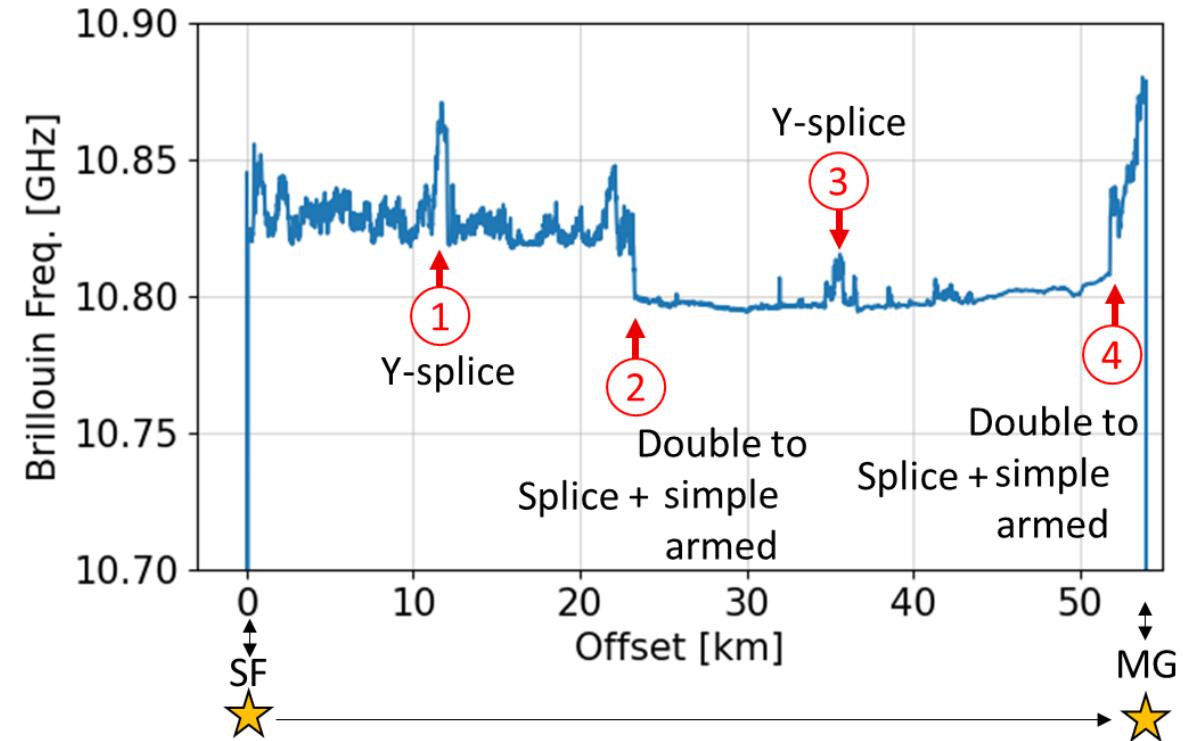

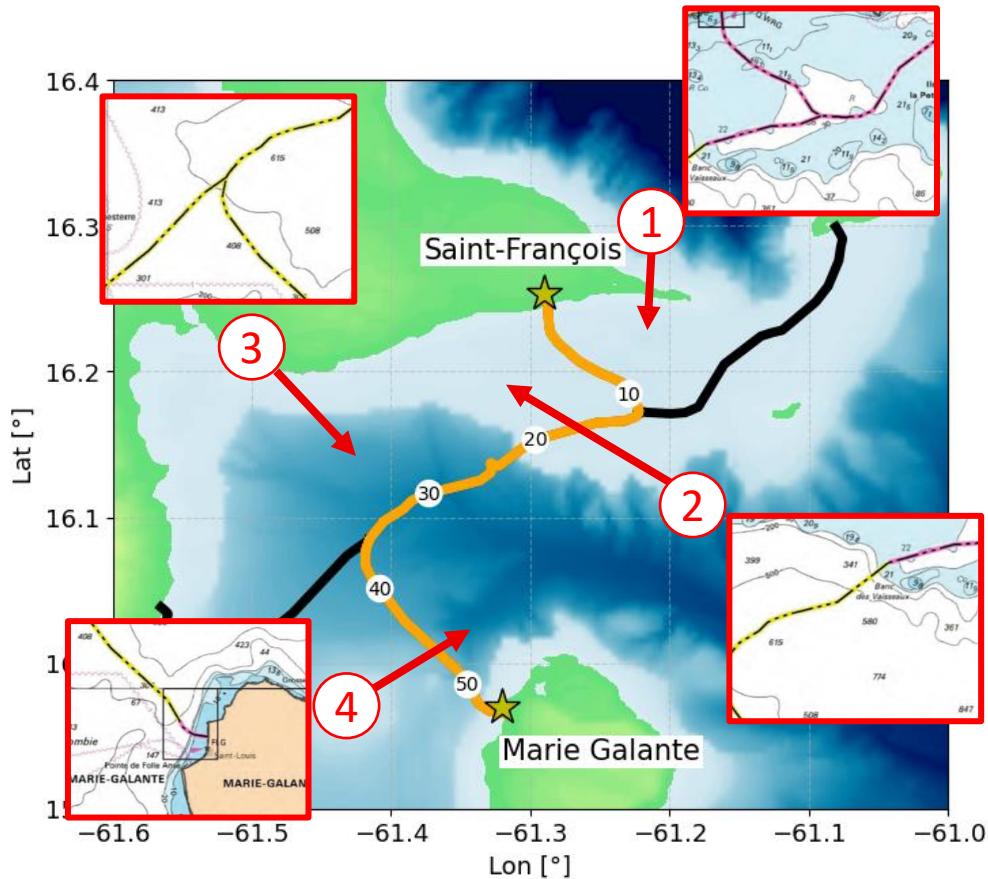

# Monitored paths

Monitored Paths	Length (km)
Saint-François → La Désirade	36 km
Saint-François ↔ Marie Galante	54 km
Saint-François ↔ Capesterre	63 km
Saint-François → Les Saintes	63 km
Capesterre → Les Saintes	22 km
Capesterre ↔ Marie Galante	45 km

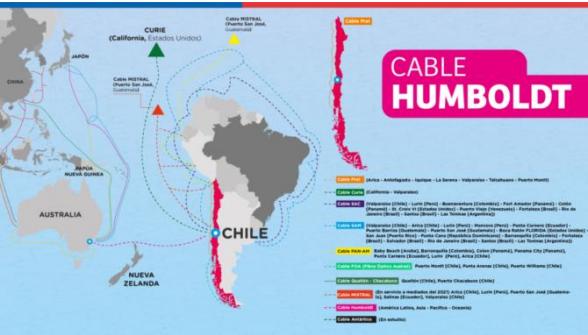

## The baseline: cable characterization from the absolute measurement

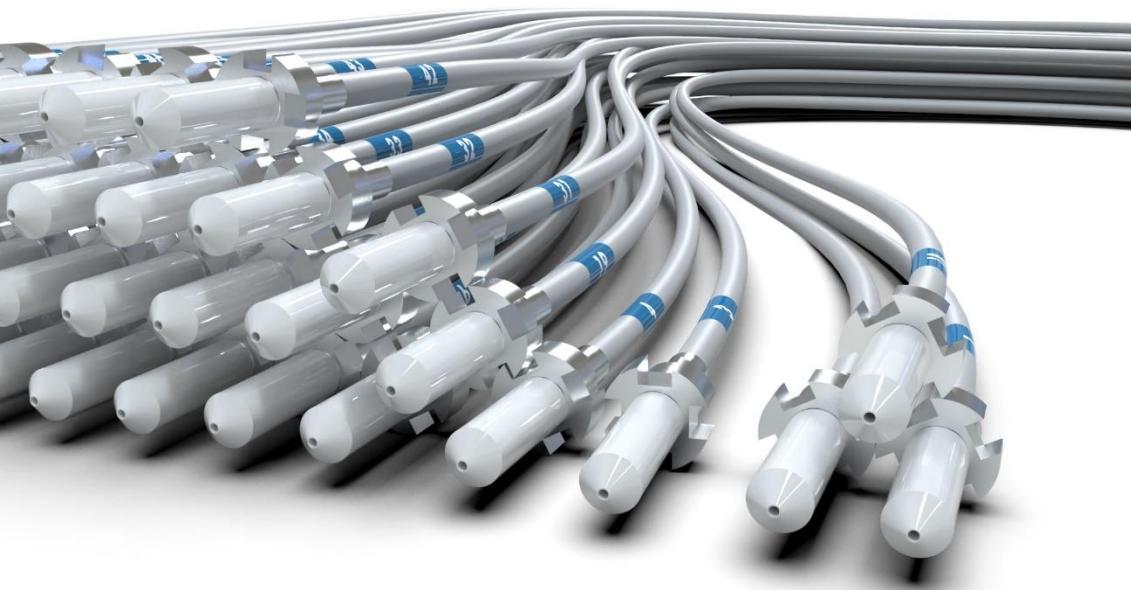

## Conclusions

---

- ✓ We are performing BOTDR acquisitions
  - Every 6 months on the telecommunication network in Guadeloupe
  - Every 2 hours on Catania FOCUS cable
  - Future site: Chili end 2024

- ✓ Submarine telecom cables can be used as sensors
